

Installation

Front view

- ① Water inlet hose (waterproof metal, braided)
- ② Electrical connection
- ③ Flexible drain hose (with detachable elbow)
- ④ Control panel
- ⑤ Detergent drawer
- ⑥ Door
- ⑦ Access to drain filters, drain pump and emergency release
- ⑧ Access panel for TwinDos containers
- ⑨ 4 height-adjustable feet

Rear view

- ① Protruding lid for holding when moving the appliance
- ② Drain hose
- ③ Water inlet hose
- ④ Safety caps for transit bars
- ⑤ Transport clips for water inlet hoses and drain hoses
- ⑥ Electrical connection

Installation

Installation surface

A concrete floor is the most suitable installation surface. It is far less prone to vibration during the spin cycle than wooden floorboards or a carpeted surface.

Please note:

- The washer-dryer must be level and securely positioned.
- To avoid vibrations during spinning, the washer-dryer must not be installed on soft floor coverings.

If installing on a wooden joist floor, please note:

- Use a plywood base underneath the washer-dryer (at least 59 x 52 x 3 cm). The base must span several joists and be bolted to the joists and not only to the floorboards.

Tip: If possible, install the washer-dryer in a corner of the room, as this is usually the most stable part of the floor.

! Danger of injury due to unsecured washer-dryer.

If the washer-dryer is installed on an existing on-site plinth (concrete or brick), there is a danger of the machine falling off the plinth during the spin cycle.

Secure the washer-dryer with a fastening bracket (optional accessory).

Carrying the washer-dryer to its installation site

! Danger of injury due to unsecured lid.

The fixings at the back of the lid could break as a result of external forces. There is a danger of the lid being pulled off when carrying the machine.

Before carrying the machine, check that the lid is secure where it protrudes at the back of the machine.

- Carry the washer-dryer by the front feet and by the lid where it protrudes at the back of the machine.

Removing the transit bars

Removing the left-hand transit bar

- Push the cover out and turn the left-hand transit bar 90° using the open spanner supplied.

- Pull out the transit bar.

Removing the right-hand transit bar

- Push the cover out and turn the left-hand transit bar 90° using the open spanner supplied.

- Pull out the transit bar.

Covering holes

⚠ Danger of injury from sharp edges.

There is a danger of injury from reaching into holes that are not covered.

Cover the holes for the transit bars after they have been removed.

- Push the covers in firmly until they engage in position.

Installation

Refitting the transit bars

 Risk of damage from incorrect transport.

The washer-dryer may become damaged if moved without the transit bars in place.

Keep the transit bars in a safe place. Fit them again if the washer-dryer is to be moved (e.g. when moving house).

Opening the covers

- Press against the retainer with a sharp object (a narrow screwdriver, for example).

The cover will open.

Fitting the transit bars

- To fit the bars, follow the instructions for removing them in reverse order.

Tip: The bars will slide in more easily if you lift the drum slightly.

Installing under a worktop

Building under kits* must only be installed/dismantled by a specialist.

- A special **building under kit*** is required. The cover plate included in the building under kit* replaces the lid of the washer-dryer. It is necessary to fit the cover plate for electrical safety reasons.
- Connections for electricity, water and drainage should be installed in such a way that they remain accessible when the washer-dryer is in its final position.

The building under kit includes installation instructions.

* Optional accessories

Aligning the washer-dryer

The washer-dryer must stand perfectly level on all four feet to ensure safe and proper operation.

Incorrect installation may increase electricity and water consumption and may cause the washer-dryer to move about.

Screwing out and adjusting the feet

The 4 adjustable feet are used to level the washer-dryer. The appliance is supplied with all feet screwed in.

- Using the open spanner supplied, turn counter nut **2** in a clockwise direction. Then turn counter nut **2** together with foot **1** to unscrew.

- Use a spirit level to check the washer-dryer is standing level.
- Hold foot **1** securely with a pipe wrench. Turn counter nut **2** again using the open spanner supplied until it sits firmly up against the casing.

 Risk of damage from incorrectly aligned washer-dryer.

There is a danger of the washer-dryer moving about if the feet are not secured.

Turn all 4 counter nuts for the feet until they sit firmly up against the casing. Please also check this for the feet which did not need adjustment.

Installation

The water protection system

The Miele water protection system protects all parts of the washer-dryer from water damage.

The system mainly consists of the following components:

- the inlet hose
- the electronic unit and drainage and overflow protection
- the drain hose

Inlet hose

- Protects the safety valve from bursting

The inlet hose can withstand pressure greater than 14,000 kPa.

- The inlet hose has a protective sleeve.

The inlet hose has metal braiding as a “second skin” to protect against damage.

Electronic unit and casing

- The floor tray

Any leaking water is collected in a floor tray in the base of the washer-dryer. A float switches off the water inlet valves. Further water intake is blocked. The water inside the suds container is pumped down.

- Overflow protection

This prevents the washer-dryer from taking in too much water and overflowing. If the water level exceeds a certain level, the drain pump switches on and pumps the excess water away.

Drain hose

The drain hose is protected by a ventilation system which prevents the washer-dryer from being emptied completely.

Water intake

 Health risk and risk of damage due to contaminated incoming water.

The quality of the incoming water must correspond to the drinking water specification of the country in which the machine is being operated.

Always connect the washing machine to the mains water supply.

The washer-dryer is not required to have a non-return valve connected to the mains water supply as the washing machine has been designed to comply with DIN regulations in Germany.

The water inlet pressure must be at least 100 kPa and must not exceed an overpressure of 1000 kPa. If the pressure exceeds 1000 kPa, a pressure reducing valve must be installed.

Connection to the mains water supply should incorporate a stopcock with a $\frac{3}{4}$ " screw thread. If no stopcock is available, only a qualified installer may connect the washer-dryer to the mains water supply.

The connection point is subject to mains water pressure.

You should open the stopcock slowly and check for leaks. Correct the position of the seal and screw thread if water escapes.

The washer-dryer is **not** suitable for connection to a hot water supply.

Maintenance

Only use a genuine Miele hose that has been pressure tested to withstand at least 14,000 kPa should you ever need a replacement.

The dirt filter in the union nut at the open end of the water protects the water intake valve.

This filter must not be removed.

Hose extension

A 1.5 metre long metal extension hose is available from Miele as an optional accessory.

Installation

Water drainage

The suds are drained through a drain pump with a 1 m delivery head. For the water to drain freely, the hose must be free of kinks. The elbow piece supplied hooks onto the end of the hose. If required, the hose can be extended to a length of up to 5 m. Accessories are available from Miele or from your Miele dealer.

For a delivery head of more than 1 m (up to a max. of 1.8 m) a replacement drain pump will need to be fitted. Please contact Miele for advice. With a delivery head in excess of 1 m the hose can be extended to a maximum of 2.5 m. Accessories are available from Miele or from your Miele dealer.

Drainage options:

1. Directed into a sink or basin:

Please note:

- Hook the hose over the edge and secure it.
- If the water is pumped into a washbasin, make sure that it can drain away freely. Otherwise there is a risk of water overflowing or of some of the drained water being sucked back into the machine.

2. Connected securely to a plastic drain pipe with a rubber nipple (there is no need to use a siphon).

3. Connected securely to a floor drain (gully).

4. Connected securely to a washbasin with a plastic nipple.

Connected securely to a washbasin

- ① Adapter
- ② Spigot nut
- ③ Hose clip
- ④ End of the hose

- Fit adapter ① to the sink drain outlet using nut ②.
- Attach the end of hose ④ to adapter ①.
- Use a screwdriver to tighten hose clip ③ up close to the nut.

Electrical connection

The appliance is supplied with a mains cable with moulded plug for connection. Please ensure the connection data (voltage and frequency) quoted on the data plate match the household mains supply. Please consult a qualified electrician if you are in any doubt.

Connection should be made via a suitable switched socket which is easily accessible after installation.

For extra safety it is advisable to operate the appliance via a suitable residual current device (RCD). Contact a qualified electrician for advice.

Do not connect the appliance to the mains electricity supply by a multisolet adapter or an extension lead. These are a fire hazard and do not guarantee the required safety of the appliance.

If the connection cable is faulty, it may only be replaced by a qualified electrician in order to avoid a hazard.

Non-rewireable plugs BS 1363

The fuse cover must be refitted when changing the fuse, and if the fuse cover is lost, the plug must not be used until a suitable replacement is obtained. The colour of the correct replacement cover is that of the coloured insert in the base of the plug, or the colour that is embossed in words on the base of the plug (as applicable to the design of plug fitted).

Replacement fuses must be ASTA approved to BS 1362 and have the correct rating. Replacement fuses and fuse covers may be purchased from your local electrical supplier.

WARNING: THIS APPLIANCE MUST BE EARTHED
