To avoid the risk of accidents or damage to the machine, it is essential to read these instructions before it is installed and used for the first time.

Caring for the environment

Disposal of the packing material

The packaging is designed to protect the appliance from damage during transportation. The packaging materials used are selected from materials which are environmentally friendly for disposal and should be recycled.

Recycling the packaging reduces the use of raw materials in the manufacturing process and also reduces the amount of waste in landfill sites.

Disposing of your old appliance

Electrical and electronic appliances often contain valuable materials. They also contain specific materials, compounds and components, which were essential for their correct function and safety. These could be hazardous to human health and to the environment if disposed of with your domestic waste or if handled incorrectly. Please do not, therefore, dispose of your old appliance with your household waste.

Please dispose of it at your local community waste collection / recycling centre for electrical and electronic appliances, or contact your dealer or Miele for advice. You are also responsible (by law, depending on territory) for deleting any personal data that may be stored on the appliance being disposed of. Please ensure that your old appliance poses no risk to children while being stored prior to disposal.
This washing machine complies with current safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the machine, please read these instructions carefully before using it for the first time. They contain important information on its safety, use and maintenance. Keep these instructions in a safe place and ensure that new users are familiar with the content. Pass them on to any future user.

Correct application

- This washing machine is intended for use in domestic households and similar working and residential environments.
- The washing machine is not intended for outdoor use.
- It must be used only as a domestic appliance to wash items which are specified by the manufacturer as being washable on the wash care label. Miele cannot be held liable for damage resulting from incorrect or improper use or operation.
- The washing machine can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, if they are supervised whilst using it or have been shown how to use it safely and recognise and understand the consequences of incorrect operation.
Warning and Safety instructions

Safety with children

- Children under 8 years of age must be kept away from the washing machine unless they are constantly supervised.
- Children 8 years and older may only use the washing machine unsupervised if they have been shown how to use it safely and recognise and understand the consequences of incorrect operation.
- Children must not be allowed to clean or maintain the washing machine unsupervised.
- Please supervise children in the vicinity of the washing machine and do not let them play with it.

Technical safety

- Please observe the instructions in “Installation and connection” and “Technical data”.
- Before setting up the washing machine, check it for any externally visible damage. Do not install or use a damaged machine.
- Before connecting the washing machine, ensure that the connection data on the data plate (fuse rating, voltage and frequency) match the mains electricity supply. If in any doubt, consult a qualified electrician.
- Reliable and safe operation of this washing machine can only be assured if it has been connected to the mains electricity supply.
The electrical safety of this washing machine can only be guaranteed when correctly earthed. It is essential that this standard safety requirement is met. If in any doubt, please have the wiring system of the building tested by a qualified electrician. Miele cannot be held liable for the consequences of an inadequate earthing system (e.g. electric shock).

Do not connect the washing machine to the mains electricity supply by a multi-socket adapter, extension lead or similar. These do not guarantee the required safety of the machine (fire hazard due to the risk of overheating).

Faulty components must only be replaced by genuine Miele original spare parts. Only when these parts are fitted can Miele guarantee the safety standards of the machine.

The electrical socket must be easily accessible after installation so that the machine can be disconnected from the electricity supply if necessary.

Unauthorised repairs could result in unforeseen dangers for the user, for which the manufacturer cannot accept liability. Repairs should only be undertaken by a Miele authorised service technician, otherwise any subsequent damage will not be covered by the warranty.

If the electrical connection cable is faulty it must only be replaced by a Miele authorised service technician to protect the user from danger.
Warning and Safety instructions

▶ The machine must be isolated from the electricity supply when cleaning and maintaining the machine and in the event of a fault.

▶ The machine must only be connected to the on-site water supply using a new hose kit. Old hose kits must not be re-used. Check the condition of the hoses regularly so that you can replace them in good time and avoid the risk of any water damage.

▶ The water flow pressure must be at least 100 kPa and should not exceed 1000 kPa.

▶ In areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the machine and its surroundings in a clean condition at all times. Any damage which may be caused by cockroaches or other vermin will not be covered by the warranty.

▶ The machine must not be used in a non-stationary location (e.g. on a ship).

▶ Do not make any alterations to the machine, unless authorised to do so by Miele.
Correct use

- Do not install the washing machine in a room where there is a risk of frost. Frozen hoses may burst or split. The reliability of the electronic control unit may be impaired at temperatures below freezing point.

- Before using the machine for the first time, check that the transit bars at the rear of the machine have been removed (see “Installation and connection - Removing the transit bars”). During spinning, a transit bar which is still in place may result in damage to both the machine and adjacent furniture or appliances.

- Turn off the stopcock if the machine is to be left for any length of time (e.g. holiday), especially if there is no floor drain (gully) in the immediate vicinity.

- Flooding danger.
  If hooking the drain hose into a wash basin, check that the water can drain off quickly enough to prevent the sink from overflowing. Make sure the drain hose is secure, so that the force of the water flowing out of the hose does not dislodge it.

- Take care to ensure that foreign objects (e.g. nails, pins, coins, paper clips) do not find their way into the machine with the laundry. These may damage components of the machine (e.g. suds container, drum), which in turn can result in damage to the laundry.
Warning and Safety instructions

▶ Take care when opening the drum door after using the steam function. Danger of burning due to escaping steam and the high temperature of the surface of the drum as well as the porthole glass. Stand back away from the machine and wait until the steam has dissipated.

▶ The maximum load for this washing machine is 9 kg (dry weight). See the “Programme chart” for the maximum recommended loads for individual programmes.

▶ If the correct amount of detergent is dispensed, the machine should not need to be descaled. If, however, you do wish to descale it, only use a proprietary natural citric acid based descaling agent. Miele recommends using Miele descaling agent which is available to order from your Miele dealer. Strictly observe the instructions on the packaging.

▶ Textiles which have been pre-treated in solvent based cleaning agents must be thoroughly rinsed in clean water before being washed in the machine.

▶ Do not use solvent based cleaning agents, e.g. those containing benzine, in this machine, as this may result in damage to component parts and create toxic fumes. Such agents also pose a fire and explosion hazard.

▶ Do not use solvent based cleaning agents, e.g. those containing benzine, to clean the surfaces of the machine. They can cause damage to plastic surfaces.

▶ Only use dyes specified by the manufacturer as being suitable for use in a domestic washing machine. Always observe the manufacturer's instructions carefully.
Warning and Safety instructions

- Colour run and dye removers contain sulphur compounds which can cause damage such as corrosion. Do not use these products in this machine.

- If detergent comes into contact with the eyes, rinse them thoroughly with lukewarm water immediately. If swallowed, seek medical assistance immediately and retain the packaging or label for reference. Those with skin problems or sensitive skin should avoid their skin coming into contact with detergent.

Accessories

- Accessory parts may only be fitted when expressly approved by Miele. If other parts are used, warranty, performance and product liability claims will be invalidated.

- A Miele tumble dryer can be stacked on top of a Miele washing machine using the appropriate stacking kit (available as an optional accessory). Please make sure you order the correct one for the Miele washing machine and Miele tumble dryer.

- If installing the machine on a Miele plinth, (available as an optional accessory, depending on country), please make sure you order the correct one for this washing machine.

Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.
Operating the washing machine

Control panel

1 Control field
The control field consists of a display and various sensor controls. The individual sensors are explained in the following sections.

2 Display
The following values are shown on the display and/or selected from it:
1. The temperature, spin speed, and time left for the selected wash programme.
2. The individual values for selected extras and settings.

3 ▲▼ sensors
Values shown in the display can be changed with the ▲▼ sensors. The ▲ sensor increases the value or moves up the list; the ▼ sensor decreases the value or moves down the list.

4 OK sensor
The OK sensor is used for confirming selected values.

5 PowerWash display with the Quick and Eco sensor controls
If the PowerWash indicator lights up when you select a programme you can choose between 3 programme sequences. For further information go to “4. Select programme settings”, section “PowerWash display with the Quick and Eco sensor controls”.

- PowerWash indicator: Normal programme sequence
- PowerWash indicator with Quick sensor control: Short programme sequence
- PowerWash indicator with Eco sensor control: Energy saving programme sequence
Operating the washing machine

6 Optical interface
This is used by the Service department as a transmission point.

7 Sensors for extra options
You can supplement wash programmes with extra options. If a wash programme has been selected, the sensor controls for the possible Extras light up dimly.

8 sensor control
You can view information about the energy and water consumption of your washing machine with the sensor.
See “Washing environmentally and economically, Eco Feedback” for more information.
The following information will appear in the display:
– An estimate of the energy and water consumption before the programme begins.
– The actual energy and water consumption and the cost during the programme or at the end of the programme.

9 sensor
The sensor starts the delay start function. With Delay start you can delay the start of the programme. The start of the programme can be delayed from 15 minutes up to a maximum of 24 hours. This allows you to make use of night-time economy electricity rates, for example.
Please see “Delay start” for more information.

10 Start/Stop sensor
Touching the Start/Stop sensor starts the selected programme or cancels a programme that has already been started. The sensor flashes slowly as soon as it is possible for a programme to be started and then lights up constantly after the programme has started.

11 Cap sensor
This sensor is used for activating Cap dispensing.

12 Programme selector
This is used for selecting programmes and for switching off. The washing machine is switched on when you select a programme, and switched off by turning the programme selector to the position.
Operating the washing machine

Display
The standard display shows the following from left to right:

- the selected wash temperature
- the selected spin speed
- the programme duration

Examples on how to operate the machine

Scrolling through a list
The scroll bar in the display indicates that a list of choices is available.

Scroll down the list with the sensor. Scroll up the list with the \sensor. The sensor is used to activate the option shown in the display.

Identifying the selected option
An activated option in a list will have a tick \next to it.

Setting numerical values
The numerical value is highlighted in white. Touching the sensor decreases the value. Touching the sensor increases the value. The sensor is used to activate the value shown in the display.

Leaving a submenu
Select \ to exit a submenu.
Before using for the first time

Before setting the machine up for first use, please note the information in “Installation and connection”.

Remove the protective foil and stickers

- Remove
  - the protective foil from the door.
  - any stickers from the front and the lid.

Please do not remove any labels (e.g. the data plate), visible when you open the door.

This washing machine has undergone a complete functional test at the factory and there will be some residual water in the drum from this process.

Remove the drain hose elbow from the drum

An elbow piece for the drain hose is stored in the drum.

- Reach under the door grip and pull the door open.
- Remove the elbow piece.

Shut the door with a gentle swing.

Switching on the washing machine

- Turn the programme selector to the Cottons programme.

The welcome tone will sound and the welcome screen will light up.

1. Set the language

You will be asked to select the language you require for the display. It is possible to change the language at any time by setting the programme selector to the Further programmes/ sub-menu.

- Touch the sensors until the language you want appears in the display.
- Confirm your selection of the language by touching the OK sensor.
Before using for the first time

2. Remove the transit bars

⚠️ Failure to remove the transit bars can result in damage to the washing machine and to adjacent cabinetry or appliances.
Remove the transit bars as described in “Installation and connection”.

The following message appears in the display:

- Remove transit bars
- Confirm with the OK sensor.

3. Start the calibration programme

For optimum water and energy consumption and excellent wash results, it is important to calibrate the washing machine.

To do this, the Cottons programme must be run without laundry and without detergent.

No other programmes can be started until calibration has been carried out.

The following message appears in the display:

Open and run “Cottons” 90°C without laundry.

- Touch the sensor until the OK sensor lights up and confirm this with OK.

The calibration programme then starts. It will take approximately 2 hours.
At the end of the programme the following message will appear in the display:

- Set up complete

- Reach under the door grip and pull the door open.

Tip: Leave the door slightly open to allow the drum to dry.

- Turn the programme selector to the position.

Open the stopcock.

- Touch the Start/Stop sensor.
Washing environmentally and economically

Energy and water consumption

- To get the most out of your machine, load the maximum dry load for the programme you are using. The energy and water consumption will be the lowest in relation to the size of the load.

- When smaller amounts of laundry are washed, the automatic load control system will reduce the amount of water and energy used.

- Use the Express 20 programme for small, lightly soiled loads.

- Modern detergents make it possible to wash at lower temperatures (e.g. 20 °C). Using lower temperature settings will save energy.

- Washing at low temperatures and/or using liquid detergents can cause bacteria and odours to build up in the washing machine. Miele therefore recommends cleaning the washing machine once every month.

The washing machine reminds you to do so with the following message in the display: Hygiene info: run a programme at min. 75 °C or the "Clean machine" programme.

Detergent

- Do not exceed the amounts of detergent recommended by the manufacturer on the packaging.

- Adjust the dosage to the degree of soiling of the laundry.

- Reduce the amount of detergent with smaller loads (approx. ⅓ less than the amount recommended can be used when washing a half load).

When drying with a tumble dryer

Selecting the highest possible spin speed for the wash programme will save energy when drying in a tumble dryer afterwards.
**EcoFeedback**

You can view information about the energy and water consumption of your washing machine with the ⚛ sensor.

The following information will appear in the display:

- An estimate of the energy and water consumption before the programme begins.
- The actual energy and water consumption and the cost during the programme or at the end of the programme.

1. **Estimate**
   - After selecting a programme, touch the ⚛ sensor.

   The estimated energy and water consumption levels will be displayed as a bar chart.

   The more bars visible ( ), the higher the energy or water consumption.

   The estimate will vary depending on the wash programme, temperature and any options selected.

   Touch the OK sensor or wait until the display automatically returns to the standard display.

2. **Actual consumption**

   You can view the actual amount of energy and water used by a programme both during and at the end of the programme.

   - Touch the ⚛ sensor.

   - Use the ▲▼ sensors to change to the estimated water consumption levels.

   The consumption will alter as the programme progresses.

   If the door is opened or the machine has switched off automatically at the end of the programme, the data will revert to the estimated consumption.

   **Tip:** You can view the consumption data for the last wash programme in Settings ⚛ under Consumption.
1. Prepare the laundry

■ Empty all pockets.

⚠️ Foreign objects (e.g. nails, coins, paper clips, etc.) can cause damage to garments and to components in the machine.

Check the laundry before washing and remove any foreign objects.

Sort the laundry

■ Sort the laundry by colour and by care label. Most garments have a textile care label in the collar or side seam.

Tip: Dark textiles often contain excess dye and should be washed separately several times before being included in a mixed load. Always wash whites and coloureds separately.

Pre-treating stains

■ Badly soiled areas and stains should be cleaned as soon as possible, preferably whilst still fresh. Spillages should be carefully dabbed off using a soft, colourfast cloth. Do not rub.

Tip: Stains (e.g. blood, egg, coffee, tea) can be pre-treated using some handy tricks which can be found in the Miele guide to laundry care. Please contact Miele directly or submit a request via Internet page to obtain or view a copy of this guide.

⚠️ Solvent-based cleaners (e.g. one containing benzine) can damage plastic parts.

When pre-treating textiles, make sure that any plastic parts (e.g. buttons) do not come into contact with cleaning agent.

⚠️ Chemical (solvent-based) cleaning agents can cause severe damage to the washing machine.

Do not use solvent-based cleaning agents in this machine.

General tips

– Curtains: Remove lead weights first or place in a laundry bag.

– Underwiring and collar stiffeners: Any loose wiring in bras, shirt collar stiffeners, etc. should be removed or sewn in.

– Close any zips, attach velcro fasteners, fasten hooks and eyes etc. before washing.

– Fasten duvet covers, pillow cases etc. to prevent small items from being rolled up inside them.

Do not wash any items in this washing machine which are specified by the manufacturer as not washable on the care label (☞ symbol).
2. Select a programme

Switching on the washing machine

- Turn the programme selector to a programme.

Programme selection

1. Select standard programmes with the programme selector dial

- Turn the programme selector to the required programme.

The selected programme will be shown in the display. The standard display will then appear.

2. Select additional programmes by setting the programme selector to the “Further programmes/” position and using the display:

- Turn the programme selector to the Further programmes/ position.

The following appears in the display:

- Touch the \( \uparrow \downarrow \) sensors until the programme you want appears in the display.

- Confirm the programme with the OK sensor.

Preset programme parameters will be displayed, depending on the programme selected.
3. Load the washing machine

Open the door

- Reach under the door grip and pull the door open.

Check the drum for pets or foreign objects before loading it with laundry.

The most efficient use of energy and water is achieved when a full load is washed. However, do not overload as this reduces cleaning efficiency and causes creases.

- Unfold the laundry and load loosely into the drum.

Mixing both large and small items gives better wash results and also helps distribute the load evenly during spinning.

Tip: Please note the maximum load for the different wash programmes. The relevant programme load is always shown in the display when you select a programme.

Close the door

- Make sure that no items are caught between the door and the seal.

- Shut the door with a gentle swing.
4. Select programme settings

PowerWash display with the Quick and Eco sensor controls

If the PowerWash indicator lights up when you select a programme you can choose between 3 programme sequences. The wash result remains the same.

PowerWash display

For a normal programme sequence.

■ Do not activate the Quick or Eco sensors.

Quick sensor

For a short programme sequence. Mechanical action and energy increase with this option.

■ Touch the Quick sensor.

Eco sensor

For an energy saving programme sequence. The wash temperature is reduced and the programme duration increased.

■ Touch the Eco sensor.

Tip: See the following table for a list of programmes in which the PowerWash display is active.

<table>

4. Select programme settings

Selecting a temperature/spin speed

You can alter the pre-set temperature/spin speed of a wash programme, if this option is permitted for that programme.

Touch the ▼▲ sensors above or below the temperature or spin speed value in the display until the temperature/spin speed you want appears in the display.

Selecting an extra option

<table>
<thead>
<tr>
<th>SingleWash</th>
<th>Pre-ironing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water +</td>
<td>Extras</td>
</tr>
</tbody>
</table>

Touch the sensor for the extra you want. It then lights up brightly.

Tip: You can select multiple Extras for a wash programme.

Extras sensor control

You can select additional extras using the Extras sensor.

Touch the Extras sensor.

The following appears in the display:

- Touch the ▼▲ sensors until the extra option you want appears in the display.
- Confirm the extra option with OK.

Not all extra options can be selected with every programme. If an extra option is not dimly lit, this option is not permitted for the wash programme (see “Extra options”).
4. Select programme settings

Delay start

With Delay start you can delay the start of the programme.

The hours can be set from 00 to 24. The minutes can be set in 15 minute increments from 00 to 45.

Setting the delay start time

- Touch the \(\diamond\) sensor.

The following will appear in the display:

\[
\begin{array}{c}
\text{Start in} \\
00:00 \text{ h}
\end{array}
\]

- Set the hours with the \(\bigvee \bigwedge\) sensors. Confirm with the OK sensor.

The display will change:

\[
\begin{array}{c}
\text{Start in} \\
06:00 \text{ h}
\end{array}
\]

- Set the minutes with the \(\bigvee \bigwedge\) sensors. Confirm with the OK sensor.

Tip: The values will count upwards and downwards automatically if you keep your finger on the \(\bigvee \bigwedge\) sensor.

Cancelling delay start

The selected delay start time can be cancelled before the programme starts.

- Touch the \(\diamond\) sensor.

The selected delay start time will appear in the display.

- Set a time value of 0:00 \(\text{h}\) with the \(\bigvee \bigwedge\) sensors. Confirm with the OK sensor.

The selected delay start time has been cancelled.

After the programme has started, the selected delay start time can only be changed or cancelled by interrupting the programme.

Altering Delay start

The selected delay start time can be changed before the programme start.

- Touch the \(\diamond\) sensor.

- Change the specified time and confirm with the OK sensor.
There are several options for adding detergent.

**Detergent dispenser drawer**

Any detergent suitable for automatic front loading washing machines can be used. Please observe the instructions for use and dosage on the detergent packaging.

**Adding detergent**

- Pull out the detergent drawer and add detergent to the compartments.

- Detergent for the pre-wash
- Detergent for the main wash and soaking
- Fabric softener, liquid starch, or capsules

**Adding fabric conditioner**

- Add fabric conditioner or liquid starch to the compartment. **Do not exceed the maximum level mark.**

It will be automatically dispensed in the final rinse. At the end of the programme a small amount of water remains in the compartment.

If starching frequently, thoroughly clean the dispenser compartment, especially the siphon tube, regularly.
5. Add detergent

Tips on dosing
Adjust the detergent dosage to the level of soiling of the laundry and the size of the load. Reduce the amount of detergent with smaller loads (e.g. reduce the amount of detergent by \( \frac{1}{3} \) when washing a half load).

**Too little detergent:**
- Results in laundry not being cleaned properly and may cause it to become grey and hard to the touch over time.
- Can lead to a build-up of mould in the washing machine.
- Results in grease not being completely removed from the laundry.
- Can lead to limescale deposits on the heater elements.

**Too much detergent**
- Causes poor wash, rinse, and spin results.
- Causes higher water consumption as an extra rinse cycle is automatically activated.
- Is a greater burden on the environment.

**Using liquid detergent with a pre-wash**
Liquid detergent cannot be used for the main wash if the pre-wash has been selected.

Use powder detergent for the main wash.

**Using detergent tablets or pods**
*Always* put detergent tablets or pods directly in the drum with the laundry. They cannot be added via the detergent dispenser drawer.

See “Detergent” for further information.
5. Add detergent

CapDosing

Three different types of capsule are available:

- Fabric care (e.g. fabric conditioner, proofing agent)
- Additives (e.g. detergent enhancers)
- Detergent (for the main wash only)

Each capsule contains the correct amount for one wash cycle.

You can order the capsules online at www.miele.co.uk or from Miele (see the end of this booklet for contact details).

⚠️ Keep capsules out of the reach of children.

Activating CapDosing

- Touch the  sensor.

The following appears in the display:

![No Cap](image)

- Touch the  sensors until the capsule you want appears in the display.
- Confirm the capsule with the OK sensor.

Inserting a capsule

- Open the detergent dispenser drawer.

- Open the lid of the  compartment.

- Press the capsule in firmly.
5. Add detergent

- Close the lid and press it firmly shut.
- Close the detergent dispenser drawer.

The capsule is opened by the act of inserting it in the detergent dispenser drawer. The contents can run out of the capsule if you then remove it from the drawer before it is used. In this case, dispose of the capsule and do not re-use it.

The wash programme will dispense the contents of the capsule at the correct time.

Water intake to the 🛀 compartment is solely via the capsule.
No additional fabric conditioner may be added to the 🛀 compartment when using a capsule.

- Remove the empty capsule at the end of the programme.

For technical reasons a small amount of water will remain in the capsule.

Deactivating or changing CapDosing

CapDosing can only be deactivated or changed prior to programme start.

- Touch the 🚰 sensor.
- Select No Cap (deactivate) or a different type of capsule (change).
Starting a programme

- Touch the flashing Start/Stop sensor.

The door will lock (☐ will appear in the display to show this) and the programme will start.

If a delay start time has been selected, then this will count down in the time display. At the end of the delay start time or immediately after the programme has started the programme duration will appear in the time display.

Energy savings

After 10 minutes, the indicators dim. The Start/Stop sensor flashes slowly.

To reactivate the indicators:
- Touch the Start/Stop sensor (this does not have any effect on a programme that is running).

End of programme

The door is still locked during the Anti-crease phase and the following will appear alternately in the display:

Finish/Anti-crease OK

and

Press Stop button OK

- Touch the Start/Stop sensor. The door will unlock.

- Pull open the door.

- Remove the laundry.

Items left in the drum could discolour other items in the next wash or become discoloured themselves. Check that all items have been removed from the drum!

- Check the folds in the door seal for any small articles, e.g. buttons, which might be lodged there.

**Tip:** Leave the door slightly open to allow the drum to dry.

- Turn the programme selector to the position. This switches the washing machine off.

- If applicable, remove the used capsule from the detergent dispensing drawer.

**Tip:** Leave the detergent dispenser drawer slightly open to allow it to dry.
Spinning

Final spin speed in the programme

When a programme is selected, the optimum spin speed for this wash programme is shown in the display.

A faster spin speed can be selected for certain wash programmes.

The highest selectable spin speed is indicated in the table.

Interim spin
There is a spin cycle after the main wash and between the rinses. A reduction in the final spin speed will also reduce the interim spin speed as appropriate.

Omitting the final spin (Rinse hold)
If Rinse hold is selected, the laundry remains in the water following the final rinse cycle. This helps prevent creasing if the laundry is not going to be removed from the drum immediately after the end of the programme.

- Set the spin speed.

To start the final spin
The washing machine will display the maximum spin speed possible. You can reduce the spin speed.

- Touch the Start/Stop sensor.

To end the wash programme
Select this option if you want to remove the laundry when it is dripping wet and without spinning.

- Reduce the spin speed to 0.
- Touch the Start/Stop sensor.

The water will be pumped away.

Omitting the interim spin and the final spin
- Before the start of the wash programme, reduce the spin speed to 0.
- Touch the Start/Stop sensor.

After the last rinse, the water will be pumped away and the anti-crease phase will switch on.
In some programmes an additional rinse is introduced with this setting.

</tr>
</tbody>
</table>

### Settings 🎟/maintenance

**Settings 🎟**

You can use the settings function to alter the washing machine's electronics to suit changing requirements. See “Settings” for more detailed information.

**Maintenance**

The washing machine has a maintenance programme.

<table>
<thead>
<tr>
<th>Clean machine</th>
<th>85 °C</th>
<th>No load</th>
</tr>
</thead>
<tbody>
<tr>
<td>With frequent washing at low temperatures there is a danger of a build-up of bacteria in the washing machine.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cleaning the washing machine will significantly reduce bacteria, mould, and biofilm and prevent the build-up of unpleasant odours.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>– Optimum results can be achieved by using Miele machine cleaner. Alternatively, a universal powder detergent can be used.</td>
</tr>
<tr>
<td>– Dispense the washing machine cleaner or universal detergent directly in the drum.</td>
</tr>
<tr>
<td>– Do not load any laundry. The drum must be empty for the cleaning programme.</td>
</tr>
</tbody>
</table>
Extra options

You can use the extra options buttons to augment the wash programmes.

Selecting Extras
Extra options are selected or deselected using the sensors in the control field. Additional extra options can be selected from the display using the Extras sensor.

Touch the sensor for the extra option you want.

The relevant sensor will light up brightly.

Not all extra options can be selected with every programme.

An extra option that is not permitted for the wash programme is not lit dimly and cannot be activated by touch.

SingleWash
For efficiently washing a very small load (< 1 kg) in a normal wash programme. The wash duration is reduced.

Please note the following advice:

– Use liquid detergent
– Reduce the dosage to a maximum of 50% of the amount quoted for a ½ load

Pre-ironing
In order to reduce creasing, the laundry undergoes a smoothing process at the end of the programme. Reducing the maximum load by 50% will give a better result. Follow the instructions in the display. Small loads give a better result.

The garments must be suitable for drying in a tumble dryer and suitable for ironing.

Water +
The water level in the wash and rinse stages is increased and a second rinse is carried out in the “Separate rinse/Starch” programme.

You can select other functions for the Water + control. These are described in “Settings”.

| SingleWash | Pre-ironing |
| Water +    | Extras      |

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
Extra options can be selected using the “Extras” sensor control

Selecting extra options in the display
■ Touch the Extras sensor.
The first extra option which can be selected appears in the display.
■ Touch the △ sensors until the extra option you want appears in the display.
■ Confirm the extra option with OK.
The extra option will be given a ✓ next to it.

Deselecting an extra option
■ Touch the Extras sensor.
The first extra option which can be selected appears in the display.
■ Touch the △ sensors until No Extras appears in the display.
■ Confirm No Extras with the OK sensor.
The previously selected extra option is now deselected.

Stains
For cleaning stained laundry. The programme sequence is altered with this option.

Pre-wash
For laundry with large amounts of dirt, e.g. dust and sand.

Soak
For heavily soiled and stained items with protein stains.

A duration of between 30 minutes and 6 hours can be chosen for the soak process in 30 minute increments. See “Settings” for more information.

The factory default setting is 30 minutes.

Intensive
For hard-wearing laundry that is very heavily soiled. Cleaning efficiency is increased through more intense mechanical action and the application of more heat energy.

Extra quiet
This option reduces noise levels during the wash programme. Use this if you want to wash during quiet periods (for instance when children are sleeping). The final spin is automatically reduced to □ (Rinse hold). The programme duration is increased.

Extra gentle
Drum rotation and wash duration are reduced. Lightly soiled fabrics are washed more gently.

AllergoWash
This option should be used where high standards of hygiene are required. More energy is used to lengthen temperature holding times and more water is used to increase rinsing efficiency. The items must be suitable for drying in a tumble dryer □ and suitable for ironing □ □.

## Garment care label symbols

### Washing

The figure quoted in the bucket is the maximum temperature the garment can be washed at. The number of bars under the symbol indicates the level of agitation permitted.

- **No bar under the symbol:** normal agitation
- **One bar under the symbol:** reduced agitation
- **Two bars under the symbol:** much reduced agitation
- **Hand wash (if no temperature is specified, use the lowest temperature or cold)**
- **Do not wash**

### Programme selection examples

### Ironing

The number of dots indicates the ironing temperature

- **Hot iron (max. sole plate temp. approx. 200 °C)**
- **Medium hot iron (max. sole plate temp. approx. 150 °C)**
- **Cool iron (max. sole plate temp. approx. 110 °C)**
- Do not steam iron garments carrying this symbol as this could cause irreversible damage.
- **Do not iron**

### Professional cleaning

- **Dry clean only. The letters indicate the type of cleaning agent required.**
- **Professional Wet Clean only**
- **Do not dry clean**

### Bleaching

- **Any oxidising bleaching agent can be used**
- **Only use an oxygen based bleach or a non-chlorine bleach**
- **Do not bleach**

Programme sequence

Programme sequence

\[\begin{align*}
\text{=} & \quad \text{low water level} \\
\text{=} & \quad \text{medium water level} \\
\text{=} & \quad \text{high water level} \\
\text{=} & \quad \text{intensive rhythm} \\
\text{=} & \quad \text{normal rhythm} \\
\text{=} & \quad \text{sensitive rhythm} \\
\text{=} & \quad \text{handwash rhythm} \\
\checkmark & \quad \text{carried out} \\
- & \quad \text{not carried out}
\end{align*}\]

This washing machine has fully electronic controls with automatic load control. The washing machine takes in the right amount of water required for the programme depending on the amount of laundry and its absorbency rate.

The programme sequences outlined in the chart are based on the basic programme with a full load.

The washing machine programme sequence display shows which stage of the programme has been reached.

Special features in the programme sequence

Anti-crease:

at the end of the programme the drum continues to turn at intervals for up to 30 minutes to help prevent creasing.

Exception: There is no anti-crease phase in the Woollens \(\text{=}\) and Silks \(\text{=}\) programmes.

The door can be opened at any time during the anti-crease phase.

1) If a temperature of 60 °C or higher is selected, and with \(\text{=}\) and \(\text{=}\), two rinses are carried out. If a temperature of less than 60 °C is selected, three rinses are carried out.

2) An additional rinse is carried out if:
   - there is too much foam in the drum
   - a spin speed lower than 700 rpm has been selected.

3) An additional rinse is carried out if:
   - Water + has been selected and the options Extra rinse or Extra water + rinse have been activated in the Settings menu.

4) Run-up to spin: A run-up to spin is carried out before the wash process begins to deflate down-filled items. Subsequent water intake for the main wash is through compartment \(\text{=}\).

5) An additional rinse is carried out if:
   - the Water + option is selected.
Programme sequence

PowerWash 2.0

PowerWash 2.0, a washing technique developed by Miele, is activated in the following programmes with small and medium-sized loads:

- Cottons
- Minimum iron
- Shirts
- Automatic plus

How it works

Conventional washing techniques wash with more water than the laundry can absorb. This total volume of water needs to be heated.

The PowerWash 2.0 washing technique only uses slightly more water than the laundry can absorb. The water which has not been absorbed by the laundry heats up the drum and the laundry and is sprayed into the laundry over and over again. This reduces the amount of energy used.

Activation

The washing machine calculates the size of the load at the beginning of the wash programme. PowerWash 2.0 is activated if the following conditions are present:

- There is a small to medium-sized laundry load in the drum.
- The temperature selected does not exceed 60°C.
- The final spin speed selected is not lower than 600 rpm.
- CapDosing (💧, ⚫) has not been selected for the main wash.

With some options (e.g. Pre-wash, Water +) PowerWash 2.0 is not activated.

Special features

- Drenching phase
  The washing machine will spin a few times at the beginning of the programme. During spinning, the water discharged is sprayed back into the laundry in order to achieve optimum moisture penetration.
  
  The optimum water level is set at the end of the drenching phase. If necessary, the washing machine will pump water away or take in a little more fresh water.

- Noises during the heating phase
  Unusual bubbling noises can occur while the laundry and the drum are being heated.

- Detergent
  Dispense the correct amount of detergent (with smaller loads).
Changing the programme sequence

Cancelling a programme

You can cancel a wash programme at any time after it has started.

- Touch the Start/Stop sensor.

The following will appear in the display:

```
Cancel programme
OK
```

- Touch the OK sensor.

The suds will be pumped away. The following will appear in the display:

```
Prog. cancelled
OK
```

Wait until the door unlocks.

- Pull open the door.
- Remove the laundry.

Interrupting a programme

- Turn the programme selector to the position.

The washing machine switches off.

- To continue: turn the programme selector to the position of the wash programme that was started.

Tip: If Cannot be changed appears in the display, the programme selector is in the incorrect position.

Changing a programme

After the successful start of a programme it is no longer possible to change the programme.
Changing the programme sequence

Safety lock

Locking the machine prevents a wash programme being cancelled by mistake.

Activating the safety lock

- Touch the Start/Stop sensor.
  
  The following will appear in the display:

- Use the \( \uparrow \) sensor control to scroll through the list:

- Touch the OK sensor.

Deactivating the safety lock

- Touch the Start/Stop sensor.
  
  The following will appear in the display:

- Touch the OK sensor.

Adding or removing laundry

Laundry can only be added or removed at the beginning of a wash programme.

If the message to Add laundry is not visible in the display then it is no longer possible to add items of laundry.

- Press the Start/Stop button.
  
  The following will appear in the display:

- Touch the \( \uparrow \downarrow \) sensors until the following appears in the display:

- Touch the OK sensor.
  
  The programme will stop and the door will unlock.

- Touch the OK sensor.

  The programme will continue.

- Pull open the door.
- Add or remove items.
- Close the door.
- Touch the Start/Stop sensor.

The programme will continue.
The correct detergent

All detergents produced for automatic washing machines are suitable. Follow the manufacturer’s instructions and dosage recommendations on the packaging.

For users in Asia: please use a low foaming detergent suitable for use in front-loading machines

The right amount to dispense will depend on the following:

– the soiling level of the load
– the quantity of the laundry
– the water hardness level.
  Check with your local water supplier if you do not know the hardness level in your area.

Water softeners

A water softener can be used to cut down on the use of detergents in areas with water hardness levels II and III. Dispense according to the amount specified on the packaging. First add detergent and then the water softener.

You can then use the recommended amount of detergent for water hardness level I.

Water hardness levels

<table>
<thead>
<tr>
<th>Hardness scale</th>
<th>Hardness level in mmol/l</th>
<th>German scale °d</th>
</tr>
</thead>
<tbody>
<tr>
<td>I (soft)</td>
<td>0 – 1.5</td>
<td>0 – 8.4</td>
</tr>
<tr>
<td>II (medium)</td>
<td>1.5 – 2.5</td>
<td>8.4 – 14</td>
</tr>
<tr>
<td>III (hard)</td>
<td>above 2.5</td>
<td>above 14</td>
</tr>
</tbody>
</table>

Dispensing aids

Use dispensing aids, (e.g. balls) if these are supplied with the detergent, particularly when using liquid detergent.

Refill packs of detergent

When purchasing detergent buy refill packs wherever possible. This helps reduce the amount of waste packaging.

Fabric conditioner and liquid starch

Fabric conditioner makes garments soft to handle and helps prevent static cling when tumble drying.

Starch stiffens and gives body to items of laundry, e.g. shirts, tablecloths and bed linen.
Detergent

Adding fabric conditioner or liquid starch separately

Prepare the starch in accordance with the manufacturer’s instructions on the packaging.

Tip: When adding fabric conditioner, activate the Water + extra.

- Add fabric conditioner to the ◆ compartment or insert the appropriate capsule.
- Add liquid starch to the ◆ compartment and powder or viscous starch to the ◆ compartment.
- Select the Separate rinse/Starch programme.
- Change the spin speed if necessary.
- Activate the CAP sensor if using a capsule.
- Touch the Start/Stop sensor.

Colour run and dye removers/dyes

⚠ Colour run and dye removers can cause corrosion in the washing machine.
Do not use colour run or dye removers in this washing machine.

Dyes suitable for use in domestic washing machines can be used. However, please note that the salt used in the dyeing process can cause corrosion to stainless steel components in the machine if you use dye frequently. Always observe the dye manufacturer’s instructions carefully.

⚠ When using the machine to dye fabric it is essential to select the Water + option.
Miele recommended detergents

Miele detergents and care products have been specially designed for Miele washing machines. They are available to order via the internet at www.miele.co.uk or from Miele.

Cleaning and care

Cleaning the drum (Hygiene info)

Washing at low temperatures and/or using liquid detergents can cause bacteria and odours to build up in the washing machine. Use the Clean machine programme to clean the machine. Note the message in the display:
Hygiene info: run a programme at min. 75 °C or the "Clean machine" programme

External casing and fascia panel

⚠ Disconnect the machine from the mains electricity supply before cleaning or maintenance.

⚠ The washing machine must not be hosed down.

- Clean the casing and fascia panel with a mild non-abrasive cleaning agent or soap and water using a well wrung-out cloth. Wipe dry with a soft cloth.

- The drum can be cleaned with a proprietary stainless steel cleaning agent, following the manufacturer's instructions on the packaging.

⚠ Do not use solvents, abrasive cleaners, glass cleaners or multi-purpose cleaning agents. These could damage plastic surfaces and other parts.

Cleaning the detergent dispenser drawer

Washing at low temperatures and the use of liquid detergent can lead to a build-up of mould and bacteria in the detergent dispenser drawer.

- For hygiene reasons, clean the entire drawer at regular intervals.

Removing the dispenser drawer

- Pull out the detergent dispenser drawer until a resistance is felt. Press down the release button and at the same time pull the drawer right out of the machine.

- Clean the detergent drawer with warm water.
Cleaning and care

Cleaning the siphon and the œ/œ compartment channel

Liquid starch results in clogging. If clogged, the siphon in the œ/œ compartment will not work and the compartment can overflow. Clean the siphon particularly thoroughly after using liquid starch a few times.

1. Remove the siphon from œ compartment and clean under warm running water. Clean the siphon tube in the same way.

2. Replace the siphon.

Cleaning the fabric conditioner channel using a brush and warm water.

Cleaning the detergent dispenser drawer compartment

- Use a bottle brush to remove detergent residues and limescale from the jets inside the detergent dispenser drawer compartment.

- Replace the detergent dispenser drawer.

Tip: Leave the detergent dispenser drawer slightly open to allow it to dry.
Cleaning and care

Cleaning the water inlet filters

The washing machine has two filters to protect the water inlet valve. These filters should be checked every six months or so, or more often if there are frequent interruptions to the water supply.

To clean the filter in the union in the open end of the inlet hose:

- First turn off the stopcock.
- Unscrew the inlet hose from the stopcock.
- Remove the rubber seal 1 from the recess.
- Using pointed pliers, take hold of the plastic filter bar 2 and remove it.
- Clean the filter.
- Replace the filter and seal back in the reverse order and reconnect the hose.

To clean the filter in the water inlet valve:

- Using pliers, carefully loosen the ribbed plastic nut on the inlet valve and unscrew.
- Use pointed nose pliers to withdraw the plastic filter by the bar (see illustration).
- Clean the filter.
- Replace the filter in the reverse order.

After cleaning the filters, turn on the stopcock and check the connection is watertight. If water drips out, tighten the connection.

The two filters **must** be put back in place after cleaning.
Problem solving guide

Many malfunctions and faults that can occur in daily operation can be easily remedied. Time and money will be saved because a service call will not be needed.

The following guide may help you to find the reason for a malfunction or a fault, and to correct it.

Some of the messages in the display are more than one line long. Touch the \( \wedge \) or \( \backslash \) sensor to read them in full.

### The programme does not start

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and remedy</th>
</tr>
</thead>
</table>
| **The control panel remains dark.** | There is no power to the machine.  
- Check whether the mains plug is plugged in and switched on.  
- Check whether the fuse or circuit breaker has tripped.  

  The washing machine has switched off automatically to save energy.  
  - Switch the washing machine on again by turning the programme selector. |
| **The display prompts you to enter a code.** | Access via a code has been activated.  
- Enter the code and confirm the entry. Deactivate the code if you do not wish this message to appear in the display the next time the machine is switched on. |
| **The following appears in the display:**  

  

  Service Door lock fault F34 | The door is not closed properly. The door lock could not engage.  
- Close the door again.  
- Start the programme again.  
If the fault message appears again, contact Miele. |

■ Check whether the maximum delivery head of 1 m has been exceeded.  

If the fault message appears again, contact Miele.  
The washing machine can still be used, however without the Pre-ironing extra option.                                                                                                                                                                                                                                                                                                                                                         |
## Fault message at the end of a programme

<table>
<thead>

<th>Cause and remedy</th>
</tr>
</thead>
</table>
| Large amounts of detergent residue remain in the detergent dispensing drawer. |  - The water pressure is too low.  
  - Clean the water inlet filter.  
  - Please note that the water pressure must be at least 100 kPa (1 bar).  
  - Powder detergent used in conjunction with water softeners tends to become sticky.  
  - Clean the detergent dispenser drawer and, in the future, add washing powder to the dispensing drawer first, and then add the water softener. |
| Fabric conditioner is not completely dispensed or too much water remains in the compartment. |  - The siphon tube is not correctly positioned or is clogged.  
  - Clean the siphon, see “Cleaning and care - Cleaning the detergent dispenser drawer”. |
| At the end of the programme there is still liquid in the capsule.       |  - The small pipe in the detergent dispenser drawer onto which the capsule is placed is blocked.  
  - Clean the small pipe.  
  - This is not a fault.  
  - For technical reasons a small amount of water will remain in the capsule. |
| There is water next to the capsule in the fabric conditioner compartment |  - The \[\text{CAP}\] sensor was not activated or an empty capsule was not removed at the end of the last wash programme.  
  - Activate the \[\text{CAP}\] sensor when a capsule is next used.  
  - Remove and dispose of the empty capsule at the end of each programme.  
  - The small pipe in the detergent dispenser drawer onto which the capsule is placed is blocked.  
  - Clean the small pipe. |

## An unsatisfactory wash result

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and remedy</th>
</tr>
</thead>
</table>
| Grey, greasy particles cling to washed laundry. | Insufficient amounts of detergent were used to break down the particles of grease in heavily soiled laundry.  
  - Use more detergent.  
  - Before washing the next load, run the *Maintenance wash* using Miele machine cleaner or a powder detergent. |
| White residues which look like powder detergent are seen on dark textiles after washing. | The detergent contained compounds (zeolites) to aid water softening which are not soluble in water. These have ended up on the laundry.  
  - Try and brush off the residues with a soft brush once the laundry is dry.  
  - Wash dark textiles using a detergent which contains no zeolites. Liquid detergents usually contain no zeolites.  
  - Use the *Dark garments / Denim* programme for dark coloured laundry. |

Problem solving guide

Opening the door in the event of a blocked drain outlet and/or power cut

■ Switch off the washing machine.

■ Open the drain pump access panel.

Blocked drain outlet

If the drain outlet is blocked, there may be a large quantity of water left behind in the washing machine.

⚠️ Risk of scalding due to hot suds. Escaping suds will be hot if laundry has been washed at high temperatures! Carefully allow all suds to drain off.

Draining the washing machine

■ Remove the drain filter, though not completely.

■ Place a suitable container under the access panel, e.g. a universal oven tray.

■ Slowly unscrew the drain filters to let the water out.

■ Tighten the drain filters back up again if you need to interrupt the flow of water.

Once the flow of water ceases:

■ Remove the drain filters completely.
Clean the drain filters thoroughly.

Remove any foreign objects (e.g. buttons, coins, etc.) and clean the interior. Turn the impellers by hand to check that they rotate freely.

Replace the drain filters correctly (on the right and left) and tighten them securely.

Close the drain pump access panel.

Risk of water damage. Make sure the drain filters are securely tightened. Otherwise there is a risk of water leakage during use. Replace the drain filters correctly and tighten them securely.

Open the door

⚠️ Danger of injury due to rotating drum!
Reaching into a moving drum is extremely dangerous. Always make sure that the drum is stationary before reaching in to remove laundry.

Use a screwdriver to unlock the door.

Pull open the door.
Service

Contact in case of malfunction

In the event of any faults which you cannot remedy yourself, please contact your Miele Dealer or Miele Service.

Contact information for Miele Service can be found at the end of this document.

Please note that telephone calls may be monitored and recorded for training purposes and that a call-out charge will be applied to service visits where the problem could have been resolved as described in this booklet.

Please quote the model and serial number of your appliance when contacting Miele. This information can be found on the data plate.

The data plate is found above the porthole glass when the door is opened.

Optional accessories

Optional spare parts and accessories for this washing machine are available from your Miele Dealer, the Miele Spare Parts Department or via the internet at www.miele.co.uk.

Please note that telephone calls may be monitored and recorded for training purposes.

Guarantee

For information on the appliance guarantee specific to your country please contact Miele. See end of this booklet for contact details.
Installation and connection

Front view

1. Water inlet hose (pressure tested to 7000 kPa)
2. Mains connection cable
3. Flexible drain hose (with detachable swivel elbow)
4. Control panel
5. Detergent dispenser drawer
6. Door
7. Access to filters, pumps and emergency release
8. Four height-adjustable feet
Installation and connection

Rear view

1 Drain hose
2 Transport clips for inlet and drain hoses and mains connection cable
3 Mains connection cable
4 Protruding lid for holding when moving the machine
5 Water inlet hose (pressure tested to 7000 kPa)
6 Safety caps for transit bars
7 Transport clips for inlet and drain hoses and for storing transit bars when not in use
Installation and connection

Installation surface
A concrete floor is the most suitable installation surface for a washing machine, being far less prone to vibration during the spin cycle than wooden floorboards or a carpeted surface.

Please note:

- The machine must be level and securely positioned.
- To avoid vibrations during spinning, the machine should not be installed on soft floor coverings.

If installing on a wooden joist floor:

- We recommend a plywood base at least 59 x 52 x 3 cm). The base should span several joists and be bolted to the joist and not only the floorboards. Check for the presence of pipes and cables first.

Tip: If possible, install the machine in a corner, as this is usually the most stable part of the floor.

There is the danger of the washing machine moving about during spinning and falling off a plinth.

For this reason, if the machine is installed on a raised plinth (concrete or brick), it has to be secured against slippage using an MTS floor/plinth mounting kit (available from Miele).

Transporting the washing machine to its installation site

⚠️ Make sure the fixings at the back of the lid are secure. Otherwise there is a danger of the lid being pulled off when carrying the machine.

Before carrying the machine check that the lid is secure where it protrudes at the back of the machine.

- Carry the washing machine by the front feet and the protruding lid at the back.

Removing the transit bars

- To remove the left and right covers
  1. Pull on the attached stopper,
  2. then use a screwdriver to release the catches at the top and bottom.
Installation and connection

- Using the spanner supplied, turn the left-hand transit bar 90°, then pull the transit bar out.
- Turn the right-hand transit bar 90°, then pull the transit bar out.
To avoid the risk of injury, the holes for the transit bars must be covered after the transit bars have been removed.

- Plug the holes with the plastic caps as illustrated.

- Secure the transit bars to the back of the washing machine. Make sure the top catch is located above the holder.

The washing machine must not be moved without the transit bars in place. Store them as shown or keep them in a safe place for future use. They must be re-fitted if the machine is to be moved again (e.g. when moving house).

Re-fitting the transit bars
Re-fitting is carried out by reversing the procedure.
**Levelling the machine**

The washing machine must stand perfectly level on all four feet to ensure safe and proper operation.

Incorrect installation may increase electricity and water consumption and may cause the machine to move about.

**Screwing out and adjusting the feet**

The four adjustable screw feet are used to level the machine. All four feet are screwed in when the machine is delivered.

- Use a spirit level to check that the washing machine is standing level.
- Hold foot 1 securely with a pipe wrench. Turn counter nut 2 again using the spanner supplied until it sits firmly up against the housing.

⚠️ All four counternuts must be firmly up against the housing. Please also check this for the feet which did not need adjustment. Otherwise there is a danger of the machine moving about.

- Using the spanner supplied turn counter nut 2 in a clockwise direction. Then turn counter nut 2 together with foot 1 to unscrew.
Installation and connection

**Building under a continuous worktop/ in a kitchen run**

Building under kits* must only be installed/dismantled by a suitably qualified fitter in accordance with the instructions supplied.

- A special **building under kit** with a cover plate to replace the machine lid is required. It must be fitted by a suitably qualified fitter to ensure electrical safety. N.B. If there is space to push the washing machine under the worktop without removing the lid, the building under kit is not necessary. Otherwise it is essential.

- Connections for electricity, water and drainage should be installed in such a way that they remain accessible when the machine is in its final position.

Fitting instructions are supplied with the conversion kit.

**Washer-dryer stack**

The washing machine can be combined with a Miele tumble dryer in a washer-dryer stack. The appropriate “WTV” stacking kit* to match your dryer is required.

All parts marked* are available from your Dealer or Miele.

**Please note:**

![Diagram of washer-dryer stack]

- a = at least 2 cm
- b = WTV without drawer: 172 cm
  
  WTV with drawer: 181 cm
- c = 64 cm
The water protection system

The Miele water protection system protects all parts of the washing machine from water damage.

The system consists of three main components:

– the inlet hose
– the electronic unit and drainage and overflow protection
– the drain hose

Inlet hose

– Protection against bursting

   The inlet hose is tested to withstand pressure of at least 7,000 kPa.

Electronic unit and washing machine housing

– Sump
   Any leaking water is collected in a sump in the base of the machine. A float switches off the water inlet valves, preventing any more water from flowing into the machine and water in the suds container is pumped away.

– Overflow protection
   This prevents the washing machine taking in too much water. If the water level exceeds a certain level, the drain pump switches in and pumps the excess water away.

Drain hose

The drain hose is protected by a ventilation system which prevents the washing machine from being emptied completely.
Connection to the water supply

The washing machine should be connected to a mains water supply in accordance with current local and national safety regulations. The German authorities do not require it to have a non-return valve as the washing machine has been designed to comply with DIN regulations.

The machine is designed to operate with a flow pressure of between 100 and 1,000 kPa. If it is higher than 1,000 kPa it is essential to fit a pressure reducing valve.

Connection to the mains water supply should incorporate a mains stopcock with ¾” threaded union. The stopcock should be fitted by a qualified plumber.

⚠️ The connection point is subject to mains water pressure. Turn on the stopcock slowly and check for leaks. Correct the position of the washer and union if appropriate.

The washing machine is not suitable for connection to a hot water supply.

Maintenance

Only use a genuine Miele hose that has been pressure tested to withstand at least 7,000 kPa should you ever need a replacement.

A filter is located in the open end of the inlet hose and another in the intake point to protect the inlet valve. Neither filter may be removed.

Hose extension

Longer hoses 2.5 or 4.0 m in length are available from your Miele Dealer or Miele as optional extras.
Installation and connection

Water drainage

The suds are drained through a drain pump with a 1 m delivery head. For the water to drain freely, the hose must be free of kinks. If required, the hose can be extended to a length of up to 5 m. Accessories are available from Miele or from your Miele dealer.

For a delivery head of more than 1 m (up to a max. of 1.8 m) a replacement drain pump will need to be fitted. Please contact Miele for advice. For a delivery head of 1.8 m the hose can be extended to a length of up to 2.5 m. Accessories are available from Miele or from your Miele dealer.

Drainage options:

1. Directed into a sink or basin:
   Please note:
   - Hook the hose over the edge and secure it.
   - If the water is pumped into a washbasin, make sure that it can drain away freely. Otherwise there is a risk of water overflowing or of some of the drained water being sucked back into the machine.

2. Connected securely to a plastic drain pipe with a rubber nipple (there is no need to use a siphon).

3. Connected securely to a floor drain (gully).

4. Connected securely to a washbasin with plastic nipple.

Please note:

1. Adapter
2. Spigot nut
3. Hose clip
4. End of the hose

- Fit adapter 1 to the sink drain outlet using nut 2.
- Attach the end of hose 4 to adapter 1.
- Use a screwdriver to tighten hose clip 3 up close to the nut.
### Electrical connection U.K.

All electrical work should be carried out by a suitably qualified and competent person, in strict accordance with current national and local safety regulations (BS 7671 in the UK).

Ensure power is not supplied to the appliance until after installation work has been carried out.

The appliance is supplied with a mains cable with moulded plug ready for connection to a 230-240V mains supply.

Please ensure the connection data quoted on the data plate match the household mains supply.

Connection should be made via a suitable switched socket which is easily accessible after installation.

For extra safety it is advisable to protect the machine with a suitable residual current device (RCD). Contact a qualified electrician for advice.

Do not connect via an extension lead. Extension leads do not guarantee the required safety of the appliance (e.g. danger of overheating).

---

### Non-rewireable plugs BS 1363

The fuse cover must be refitted when changing the fuse, and if the fuse cover is lost, the plug must not be used until a suitable replacement is obtained. The colour of the correct replacement cover is that of the coloured insert in the base of the plug, or the colour that is embossed in words on the base of the plug (as applicable to the design of plug fitted).

Replacement fuses should be ASTA approved to BS 1362 and have the correct rating. Replacement fuses and fuse covers may be purchased from your local electrical supplier.

**WARNING: THIS APPLIANCE MUST BE EARTHED**
Consumption data can vary from the nominal values given depending on water pressure, water hardness, water inlet temperature, room temperature, type and volume of load, fluctuations in the electricity supply and any extras selected.

The consumption data shown in the EcoFeedback display can vary from the consumption data quoted here. The variations arise from component tolerances and on-site conditions e.g. fluctuations in the pressure of the water supply, mains voltage and fluctuations in the mains voltage.

Note for test institutes

Test programme in accordance with EN 60456

With the *PowerWash 2.0* washing technique, during the heating phase, the temperature measured by the sensor in the suds container is higher than the actual temperature of the laundry. The temperature measured there **does not** reflect the temperature of the laundry.

Settings

You can use the settings to alter the washing machine's electronics to suit changing requirements.
The settings can be altered at any time.

Calling up settings

Turn the programme selector to **Further programmes/²**.

Touch the \(\uparrow/\downarrow\) sensors until the following appears in the display:

Express 20  OK

Touch the \(\uparrow/\downarrow\) sensors until the following appears in the display:

Settings  OK

Confirm with the OK sensor.

Language  OK

You are now in the Settings submenu.

Selecting settings

- Touch the \(\uparrow/\downarrow\) sensors until the setting you want appears in the display.
  - The \(\uparrow\) sensor scrolls down the list.
  - The \(\downarrow\) sensor scrolls up the list.
- Touch the OK sensor to select the setting displayed.

Changing a setting

- Touching the \(\uparrow/\downarrow\) sensors will call up the different options for the setting.

  The option which is selected will have a tick \(\checkmark\) next to it.

- When the option you want appears in the display, touch the OK sensor to activate it.

Closing the settings menu

- Turn the programme selector.
**Language**

The display can be set to appear in one of several different languages.

The flag after the word Language (Sprache in German) acts as a guide in case a language which is not understood has been set.

The language selected is saved.

**Buzzer volume**

The buzzer sounds to let you know the programme has finished. The buzzer can be set to be louder or quieter.

**Options**

- Off
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (quiet)
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (loud) (factory setting)

**Keypad tone**

Each touch of a sensor is confirmed with an audible tone.

**Options**

- Off
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (quiet)
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (factory setting)
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (loud)

**Welcome tone**

The volume for the welcome tone can be set to one of seven different settings.

**Options**

- Off
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (quiet)
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (factory setting)
- ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ ⬤ (loud)

**Consumption**

In this setting you can check the saved energy and water consumption values.

**Options**

- Previous programme
  Shows the consumption for the last wash programme carried out.
- Total consumption
  Shows the sum of the energy and the sum of the water used by the previous programmes.
- Reset function
  The energy consumption and water consumption totals are reset to zero.
## Settings

### Code

The code prevents the washing machine being used without your knowledge.

#### Options

- **Activate**
  If you activate the code, you have to enter a code after switching the washing machine on. Otherwise it cannot be operated. The factory default code is 125.

- **Change**
  If wished, you can set a different three-digit code.

  Do not forget the code you have set. If you forget the code, only Miele Technical Service can unlock the washing machine. Make a note of your new code.

- **Deactivate**
  The washing machine is to be operated again without entering a code. This only appears if the code had been activated previously.

### Brightness

You can set the brightness of the display, the sensor controls, and the dimmed sensor controls.

#### Units

The temperature can be displayed as degrees Celsius (°C) or Fahrenheit (°F).

The factory setting is °C/Celsius.

#### Options

- **Display**
  Controls the brightness of the display.
  - ■■■■■■■ (dark)
  - ■■■■■■■ (light) (factory setting)

- **Buttons active**
  Controls the brightness of the activated sensor controls.
  - ■■■■■■■ (dark)
  - ■■■■■■■ (factory setting)
  - ■■■■■■■ (light)

- **Buttons inactive**
  Controls the brightness of the sensor controls that can be activated.
  - ■■■■■■■ (dark)
  - ■■■■■■■ (factory setting)
  - ■■■■■■■ (light)

**Tip:** Ensure that there is a discernible difference in brightness between the activated and dimmed sensor controls. This makes it easier to operate the machine.
## Settings

### Disp. switch-off stat.

The display and the sensor control lighting is switched off to save energy. The **Start/Stop** sensor flashes slowly.

#### Options

- **On**
  - Lighting switches off after 10 minutes.

- **On (not current pr.)** *(factory setting)*
  - Lighting remains switched on throughout the programme. The lighting switches off 10 minutes after the programme has ended.

- **Off**
  - The lighting remains switched on.

### Programme info

You can select the information that will be displayed temporarily in the display after a programme has been selected.

#### Options

- **Programme name**
  - The programme name is shown in the display for several seconds.

- **Prog. & max load** *(factory setting)*
  - The programme name and the maximum load are shown in the display for several seconds.

- **Off**
  - Directly after the programme has been selected, the standard display is shown with temperature, spin speed, and programme duration.

### Memory

The washing machine will save the last settings (temperature, spin speed and some of the Extras) selected for a programme after the programme has started.

When the programme is chosen again, the saved settings will appear in the display.

Memory is deactivated as standard.

### Long p-wash Cotton

If you require a longer pre-wash, you can extend the standard pre-wash time of 25 minutes in the Cottons programme.

#### Options

- **No increase** *(factory setting)*
  - 25 minute pre-wash.

- **+ 6 min**
  - 31 minute pre-wash.

- **+ 9 min**
  - 34 minute pre-wash.

- **+ 12 min**
  - 37 minute pre-wash.
## Settings

### Soak duration

You can set a duration for the soak process of between 30 minutes and 6 hours.

The duration can be selected in 30 minute increments. When the Soak extra option is selected, the laundry will be soaked for the duration selected.

A duration of 0:30 h is set as standard.

### Gentle action

With gentle action activated, drum agitation is reduced. In this way, lightly soiled items can be washed more gently.

Gentle action can be activated for the Cottons and the Minimum iron programmes.

Gentle action is deactivated as standard.

### Temp. reduction

At high altitudes water has a lower boiling point. Miele recommends activating the reduced temperature setting at altitudes of 2000 m or above to prevent water from boiling. The maximum temperature is reduced to 80 °C even if a higher temperature is selected.

Temp. reduction is deactivated as standard.

## Water plus

You can increase the amount of water used in the wash programmes.

### Options

- **Extra water** (factory setting)
  The water level is increased in the wash and rinse stages of the programme.

- **Extra rinse**
  An additional rinse cycle is carried out.

- **Extra water + rinse**
  The water level is increased in the wash and rinse stages and an additional rinse is carried out.

### Water plus level

There are four different water levels which can be selected by activating the Water + Extra.

### Levels

- **Normal** (factory setting)
- **Plus 1**
- **Plus 2**
- **Plus 3**
**Maximum rinse level**

The water level in the rinses can be permanently set to the highest value.

This function is important for allergy sufferers as it achieves excellent rinse results. The water consumption will be increased.

The maximum rinse level is deactivated as standard.

**Suds cooling**

Additional water flows into the drum at the end of the main wash to cool the suds down.

Suds cooling takes place when a Cottons programme with a temperature of 70 °C or higher is selected.

Suds cooling should be activated:

- to prevent the danger of scalding if the drain hose is hooked over the edge of a sink or basin.
- where the drainage pipes do not comply with DIN 1986.

Suds cooling is deactivated as standard.

**Low water pressure**

If the water pressure is below 100 kPa (1 bar), the programme will be cancelled and a fault message will appear.

If the on-site water pressure cannot be increased, activating this function will prevent the programme from being cancelled.

Low water pressure is deactivated as standard.

**Anti-crease**

The Anti-crease function reduces creasing after the end of the programme.

At the end of the programme, the drum continues to turn at intervals for up to 30 min. The washing machine door can be unlocked at any time by touching the Start/Stop sensor and then opened.

Anti-crease is activated as standard.
Optional accessories

Detergent, fabric care, additives and machine care products are available for this washing machine. All the products have been designed for Miele washing machines.

These and many other useful products can be ordered via the internet at www.miele.co.uk or from Miele (see end of this booklet for contact details).

Detergent

UltraWhite
- Multi-purpose powder detergent
- For white and light-coloured laundry as well as heavily soiled cotton items
- Effective stain removal even at low temperatures

UltraColor
- Liquid detergent for coloured items
- For coloured and dark fabrics
- Protects bright colours from fading
- Effective stain removal even at low temperatures

Wool and delicates detergent
- Liquid detergent for delicates
- Particularly suitable for woollen and silk fabrics
- Cleans at temperatures as low as 20 °C, helps retain the shape of delicate items and protect colours

Specialist detergents

Specialist detergents are available as capsules in convenient single dose amounts or in a handy bottle.

Outerwear
- Liquid detergent for outerwear and performance clothing
- Cleans with care and is gentle on colours
- With lanolin to care for and condition membrane fabric

Sport
- Liquid detergent for sportswear and fleece garments
- Neutralises unpleasant odours
- Retains the shape of the items

Down
- Liquid detergent suitable for pillows, sleeping bags, and down-filled items
- Retains the elasticity of down and feather-filled items
- Retains the breathability of down-filled items
- Prevents down filling clumping together
Optional accessories

WoolCare
- Liquid detergent for woollens and delicates
- Includes a special wheat protein conditioning formula
- Helps prevent felting
- Gentle on colours
- Only available as capsules

SilkCare
- Liquid detergent for silks
- Contains a special silk protein conditioning formula
- Gentle on colours
- Only available as capsules

Fabric care
Fabric care is available as capsules in convenient single dose amounts or in a handy bottle.

Proofing agent
- For proofing microfibre fabrics, e.g. rain coats
- Retains the breathability of fabrics

Fabric conditioner
- Fresh, natural fragrance
- Makes laundry soft to handle

Additive

Booster
- For removing stains
- For white and coloured laundry
- Available as capsules in convenient single dose amounts

Machine care

Machine cleaner
- For cleaning the washing machine thoroughly and effectively
- Removes grease, bacteria, and associated unpleasant odours
- Use 1–3 times per year

Descaling agent
- Removes heavy limescale deposits
- Mild and gentle with natural citric acid

Water softener tablets
- Reduces the amount of detergent needed for hard water
- Less detergent residue in fabrics
- Less chemicals in waste water due to reduced amount of detergent
