Operating and installation instructions for vented tumble dryer
PT 5136 OS

To avoid the risk of accidents or damage to the machine, it is essential to read these instructions before it is installed, commissioned and used for the first time.
Caring for the environment

Disposing of the packing material

The transport and protective packing has been selected from materials which are environmentally friendly for disposal and should be recycled.

Ensure that any plastic wrappings, bags, etc are disposed of safely and kept out of the reach of babies and young children. Danger of suffocation.

Disposal of your old machine

Electrical and electronic machines often contain materials which, if handled or disposed of incorrectly could be potentially hazardous to human health and to the environment. They are, however, essential for the correct functioning of your machine. Please do not therefore dispose it with your household waste.

Energy saving tips

To avoid unnecessarily long drying times and high consumption of energy:

- Make sure that your laundry is thoroughly spun before drying. The higher the spin, the greater the savings that can be made in energy and time during drying.
- Load according to the optimum amount of laundry recommended for the programme being used. Underloading is uneconomical. Overloading gives a poorer quality of drying, and may cause unnecessary creasing.
- Make sure the room in which the dryer is located is well ventilated.
- Remove the fluff from the filter when necessary (see "Cleaning and Care").
- Check all parts of the ventilation system on a regular basis, and remove any build-up of fluff etc.
- The vent ducting should be as short, straight and smooth as possible to minimise any resistance to the air throughflow.

Please dispose of it at your local community waste recycling centre or contact your dealer for advice. Ensure that it presents no danger to children while being stored for disposal.

It is essential to read these instructions.

This tumble dryer complies with current safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the tumble dryer, please read these instructions carefully before using it for the first time. They contain important information on its safety, installation, use and maintenance.

Keep these instructions in a safe place and ensure that they are made available to new users. They must be made aware of these Warning and Safety instructions.

Pass these instructions on to any future users/owners.

Correct application

This tumble dryer is only intended for drying fabrics which have been washed in a water solution, and marked on the manufacturer’s care label as being suitable for tumble drying. If using dry cleaning kits, do so at your own risk, and follow the instructions provided on the packaging. Any other applications may be dangerous. Miele cannot be held liable for damage resulting from incorrect or improper use or operation.

The tumble dryer is not intended for outdoor use.
The tumble dryer can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, if they are supervised whilst using it or have been shown how to use it in a safe way and recognise and understand the consequences of incorrect use.

Children under 8 years of age must be kept away from the tumble dryer unless they are constantly supervised.

Children 8 years and older may only use the tumble dryer unsupervised if they have been shown how to use it in a safe way and recognise and understand the consequences of incorrect operation.

Children must not be allowed to clean or maintain the tumble dryer unsupervised.

Please supervise children in the vicinity of the tumble dryer and do not let them play with it.

Technical safety

Before setting up the tumble dryer, check it for any externally visible damage.

Do not install or use a damaged tumble dryer.

Do not make any alterations to the tumble dryer, unless authorised to do so by Miele.

Do not connect the tumble dryer to the mains electricity supply by an extension lead. Extension leads are a fire hazard and do not guarantee the required safety of the tumble dryer.
The tumble dryer may only be operated when the following conditions are met:

– the ship’s hull is longer than 28 metres.
– the list of the vessel is not more than 2°.
– any external vibration is no more than 150 Hz at an amplitude of 0.35 mm.

The safe operation and correct functioning of the tumble dryer can only be guaranteed if the above conditions are met.

The tumble dryer may not be operated on an open deck.

Appliances not marked with the CSA C/US Safety Label comply with European safety regulations. These tumble dryers must not be operated in the USA.

A risk assessment of the installation must be carried out by a suitably qualified engineer before this appliance is installed or used. Installation must only be carried out by a suitably qualified engineer.

The tumble dryer must be fixed in position when it is installed. Failure to do this could result in personal injury and damage to property.
The electrical safety of this tumble dryer can only be guaranteed when correctly earthed. It is essential that this standard safety requirement is met. If in any doubt, please have the electrical installation tested by a qualified electrician. Miele cannot be held liable for the consequences of an inadequate earthing system (e.g. electric shock).

Unauthorised repairs could result in unforeseen dangers for the user, for which Miele cannot accept liability. Repairs should only be undertaken by a Miele authorised service technician, otherwise any subsequent damage will not be covered by the guarantee. Ensure current is not supplied to the tumble dryer until after maintenance or repair work has been carried out.

Faulty components must only be replaced by genuine Miele original spare parts. Only when these parts are fitted can the safety standards of the tumble dryer be guaranteed.

To ensure the correct performance of the tumble dryer and to prevent the risk of faults and fire, it is important to check it and carry out maintenance on a regular basis.

The tumble dryer must be isolated from the electricity supply in the event of a fault and during cleaning and maintenance. Please also read the "Installation and connection" and the "Electrical connection" sections.
Warning and Safety instructions

➤ Please observe the instructions in "Installation and connection" and "Technical data".

➤ The socket must be easily accessible after installation in order to disconnect the tumble dryer from the electricity supply.

➤ For hard-wired machines, the all-pole isolator provided on-site must be easily accessible after installation in order to disconnect the tumble dryer from the electricity supply.

➤ Do not block the gap between the base of the dryer and the floor with plinth facings, deep pile carpet etc. as this would hinder a sufficient intake of air.

➤ Make sure the dryer door can be opened without hindrance after installation.

➤ In areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the tumble dryer and its surroundings in a clean condition at all times. Any damage which may be caused by cockroaches or other vermin will not be covered by the appliance guarantee.
Correct use

▶️ The maximum load of dry laundry for this tumble dryer is 6.5 kg. See the Programme chart for the maximum recommended loads in individual programmes.

▶️ Do not let anyone sit or lean on the door, as this can cause the tumble dryer to tip up. Danger of injury.

▶️ Always close the door after use. This way you will avoid the danger of:
  – children climbing into the dryer or hiding things in it.
  – pets or other small animals climbing into it.

▶️ Do not use a pressure washer or hose to clean the tumble dryer.

▶️ Always keep the area around the tumble dryer free of dust and fluff. Dust and dirt drawn into the tumble dryer can cause blockages. Faults can then occur as well as the risk of fire.
The tumble dryer must only be used when it is connected to a suitable ducting system. The installation site must be adequately ventilated.

The ducting must not be connected to
– a chimney or vent flue which is in use,
– or to ducting which ventilates rooms with fireplaces,
– or to chimneys being used by other appliances.
Smoke or exhaust fumes can cause poisoning.

Check all parts of the extraction system on a regular basis (e.g. wall vent, external grille, bends in the ducting etc.) and make sure they are all free of any hindrance. A build-up of fluff will prevent a free flow of air through the system. If the dryer is to be connected to an existing ducting system, this must be checked for suitability beforehand.

Adequate ventilation is essential to avoid the danger of asphyxia and toxic fumes where another appliance which also uses the room air (e.g. gas, oil or coal fired heater, continuous flow or other water heater) is installed in the same or an adjacent room. To ensure safe operation, and to prevent gases given off by these appliances being drawn back into the room, an underpressure of 4 Pa is the maximum permissible.

Ventilation can be maintained by:
– air inlets in the external wall which cannot be closed or blocked, or
– by fitting a window contact switch which ensures that the appliance can only be operated when the window is open.

To ensure safe operation of your tumble dryer and to avoid an underpressure of 4 Pa or more, please seek professional advice.
If more than one tumble dryer is being installed using a joint ducting system, each dryer must have its own non-return flap to the joint ducting system. Otherwise the dryers could be damaged, endangering their electrical safety.

The fluff filter must be cleaned regularly.

The dryer must not be used without the fluff filter in place or if the fluff filter is damaged in any way. A damaged filter can cause operational faults and blockages in the airways, the heating elements and in the ducting. Fire hazard. In the event of a damaged filter, switch the dryer off and replace the filter with a new one.

Do not install the tumble dryer in a room where there is a risk of frost occurring. At temperatures around freezing point the tumble dryer may not be able to operate properly. The ambient room temperature should be between +2°C and +35°C.
To prevent the risk of fire, the following textiles must not be dried in this tumble dryer:

- items which have not been washed.

- items, such as workwear, which have not been thoroughly cleaned and which are still soiled with grease, oil or other deposits (such as cosmetics, lotions etc).
  If items have not been thoroughly cleaned there is a danger that these might self-ignite when heated, even after they have been removed from the dryer at the end of the programme.

- items (e.g. mops and floor cloths) which have been treated with inflammable cleaning agents or which contain residues of acetone, alcohol, benzine, petrol, kerosene, stain remover, turpentine, wax, wax remover or other chemicals.

- items which have been splashed with hair lacquer, hair spray, nail varnish remover or similar substances.

When washing such heavily soiled items ensure that you use sufficient detergent and select a high temperature. If in doubt, wash the items several times.

Remove all items such as lighters and matches from pockets.

**Warning**: Do not switch the tumble dryer off before the drying programme has finished. If this is done, the laundry must be hung up or spread out to cool it down.
Danger.
This tumble dryer must not be connected to a controllable socket (e.g. a timer switch or a peak load shut-off device). If the dryer programme were to be interrupted before the end of the cooling down phase, the laundry could self-combust.

To prevent the risk of fire, the following must not be tumble dried:
- items which have been cleaned using chemicals (e.g. professional dry-cleaning agents).
- fabrics which contain a large proportion of rubber, foam rubber or rubber-like materials. For example, products made from latex foam rubber, shower caps, waterproof textiles, rubberised articles and items of clothing and pillows with foam rubber filling.
- damaged items which contain padding or fillings (e.g. pillows, jackets). When damaged, the filling can get out with the risk of igniting in the dryer.

In many programmes, the heating phase is followed by a cooling down phase to ensure that the items are not too hot to handle when you remove them (this also avoids the danger of the laundry self-igniting). The programme is not finished until the cooling down phase has been completed. As soon as the programme has finished, remove all laundry from the drum.

Fabric conditioner and similar products must be used according to the instructions on the manufacturer’s packaging.
Warning and Safety instructions

- Benzine, petrol, paraffin or any easily flammable liquid must not be stored or used near the tumble dryer. Danger of fire and explosion.

- Do not allow air contaminated with chlorine, fluorine or other vapours containing solvents to get into the tumble dryer. Fire hazard.

- For tumble dryers with stainless steel surfaces:
  The stainless steel surfaces must not come into contact with liquid cleaning and disinfecting agents which contain chlorine or sodium hypochlorite. These agents can have a corrosive effect on stainless steel.
  Aggressive vapours containing chlorine can also be corrosive.
  Do not, therefore, store containers of these agents near the tumble dryer.
Accessories

▶ Only use genuine Miele original spare parts and accessories with this tumble dryer. If non-Miele parts are used, guarantee, performance and product liability claims may be invalidated.

▶ A Miele tumble dryer can be stacked on top of a Miele washing machine using the appropriate stacking kit (available as an optional accessory). Please make sure you order the correct one for the Miele tumble dryer and Miele washing machine.

▶ If installing the machine on a Miele plinth, (available as an optional accessory), please make sure you order the correct one for this tumble dryer.

Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.
Operating the tumble dryer

Control panel

1 Display
   The display lights up when the machine is switched on. As soon as the dryer is ready to use, the Entry menu appears in the display.

2 Start button
   The indicator light flashes while a programme is being selected, and lights up when the programme starts.

3 –, OK, + buttons
   See the following pages for more information.

4 + button
   For selecting Delay start; Time of day display

5 PC/Optical interface
   This is used by Miele service technicians during servicing work for testing purposes.

6 Low temperature button
   For drying delicate fabrics (Care label symbol ☼).

7 Programme selector
   The programme selector can be turned clockwise or anti-clockwise.

8 On/Off button
   For switching the dryer on and off. To save energy the dryer will switch off automatically 15 minutes after the end of the programme/anti-crease phase or 15 minutes after the dryer is switched on if it is not operated.

9 Door button
   Opens the machine door independently of the electricity supply.

Before using for the first time

Before using the machine for the first time, ensure that it is correctly installed and connected. See "Installation and connection".

Before using the machine for the first time, ensure that it is correctly installed and connected. See "Installation and connection".
Display

The following are shown in the display:

- Programme selection
- Programme duration and the programme start and end time

The following are selected via the display:

- Special programmes
  Denim
  Shirts
  Outerwear
  Proofing
  Automatic (if activated)
  Smoothing
  Pillows
  Delicates
  Basket - Std. temp.
  Basket - Low temp.
  Silks handcare
  Reactivate
- Delay start
- The Settings menu

Default settings can be altered to adapt the dryer to different requirements. See the end of this booklet for further information.

–/+ buttons

For altering the values shown in the display:
- decreases the value or moves the highlighting upwards.
+ increases the value or moves the highlighting downwards.

OK button

For confirming the value selected and choosing the next element.

button

For selecting Delay start.
You can also press this button during a drying programme to check the estimated programme end time or the current time of day.
Before using for the first time

- Press the On/Off button briefly to switch on.

As soon as the dryer is ready to use, the Entry menu appears.

When the tumble dryer is switched on for the first time, the *Miele Professional welcome* screen will appear.

The *Miele Professional welcome* screen will not appear again after you have entered the language and the time of day, and run an initial programme through to the end.

The display for setting the language will then appear.

**Setting the language**

<table>
<thead>
<tr>
<th></th>
<th>dansk</th>
<th>Deutsch ✓</th>
<th>English</th>
</tr>
</thead>
</table>

- Use the + and – buttons to select the language you want, and confirm your choice by pressing the OK button.

A tick ✓ will appear beside the language to show that it has been set.

**Setting the time (of day) (if necessary)**

It is possible to alter the time at any stage via the *Settings* menu.

- Set the hour with the - and + buttons, and confirm your setting by pressing the OK button.

- Now set the minutes and confirm your selection.

**Entry menu**

The Entry menu will always appear after the machine has been switched on, until you select an option.

See "Settings menu" at the end of this booklet for more information.

- You can now load the laundry into the dryer and select a programme as described in "Short instructions".
1. Sort the laundry

Garment care label symbols

<table>

<td>☑ Warm</td>
</tr>
<tr>
<td>(for delicate textiles)</td>
<td>☑ Do not iron</td>
</tr>
<tr>
<td>☒ Do not tumble dry</td>
<td></td>
</tr>
</tbody>
</table>

Before drying

- Wash heavily soiled items very thoroughly, ensuring that you use sufficient detergent and select a high temperature. If in doubt, wash the items several times.
- Do not put soaking wet items into the tumble dryer. Make sure that your laundry is thoroughly spun before drying. The higher the spin, the greater the savings that can be made in energy and time during drying.
- New dark-coloured garments should be washed and dried separately from light-coloured garments the first few times they are washed, to avoid the risk of colours running and discolouring other garments or even the plastic components in the tumble dryer. Dark-coloured fibres can also settle on light-coloured garments and vice versa.
- Starched laundry can be dried in the tumble dryer. To achieve the usual finish, double the amount of starch should be used.
- Check the seams of padded or down-filled items to prevent the risk of fillings coming out. These could catch fire in the tumble dryer.
- Tie together textile belts and apron ties to stop them getting tangled.
- Fasten duvet covers etc. to prevent small items from being trapped inside them. Fasten hooks and eyes etc.
- Stitch in or remove loose underwiring from bras.
- Leave jackets open and undo any long zips so that textiles dry evenly.
- For an even drying result, it is important to . . .
  . . . spin,
  . . . shake out,
  . . . and sort items according to fabric type, size, care label and the drying level required.
2. Load the tumble dryer

⚠️ Using the tumble dryer incorrectly could cause a fire. Read the "Warning and Safety instructions" before using the machine.

⚠️ Make sure that objects, e.g. detergent dispensing balls, have been removed from the laundry. They could melt and cause damage to the dryer or the laundry.

- Do not overload the drum. Overloading can cause unnecessary wear and tear to the laundry, give a disappointing drying result and cause more creasing.

- To save energy, always observe the maximum load for each programme (see "Programme chart").

- Minimum iron fabrics tend to crease more the greater the load. This is also the case for garments made from very fine weave fabrics, such as shirts or blouses. If necessary, reduce the size of the load for these types of fabrics.

3. Select a programme

- On many programmes, different drying levels can be selected depending on individual requirements
  
  . . . e.g. Normal+ for laundry that you want to fold and put away immediately after drying.

  . . . e.g. Machine iron or Hand iron if the laundry needs further processing after drying, e.g. machine ironing. See "Programme chart".

- For delicate fabrics with the ☥ care label, select Low temperature as well.

- Down-filled garments have linings which have a tendency to shrink, depending on the quality of the item. They can be partially dried using the Smoothing programme.

- Pure linen should only be machine dried if specified as suitable by the manufacturer on the care label, as the surface of the fabric may otherwise become rough. They can be partially dried using the Smoothing programme.

- Woollens and wool blends tend to become matted and shrink if dried in a tumble dryer. Only dry these fabrics in a Woollens programme.

- Loopknit garments (e.g. T-shirts and underwear) tend to shrink depending on their quality. Therefore: Do not over-dry these textiles. When purchasing these garments it is advisable to take their shrinkage properties into account.
1 Sort the laundry

⚠️ It is very important to read the "Notes and tips on laundry care" section before proceeding.

2 Load the tumble dryer

- Open the door.
- Load the drum.

⚠️ To avoid damaging your laundry, when shutting the door check that no items of laundry have become trapped in the door opening.

- Shut the door either with a gentle swing, or lean against it and push it shut.
Short instructions

Select a programme

Press the On/Off button briefly to switch on.

Please note:

- If no further selection is made within 15 minutes, the dryer will switch off automatically.
- This does not apply to machines with a payment system.

Turn the selector to the programme you require.

The display will vary according to which programme has been selected.

With the Cottons and Minimum iron programmes, the drying level is selected with the programme selector.

To select a Special programme

A selection of programmes will appear in the display when you select Special programmes.

Use the + or - button to highlight the programme you want. The arrow in the display indicates that there are further options.

Confirm your selection by pressing the OK button.

On some Special programmes, the drying level can be altered as follows:

For the drying level options, see "Programme chart".

Warm air, Cool air and Basket programmes

The programme duration can be increased or reduced using the + or - buttons.
**Low temperature button**

- For drying particularly sensitive fabrics (care symbol  ), e.g. acryls, press the *Low temperature* button.

Because the heater rating is reduced for the *Low temperature* setting, clothes dry more slowly thus lengthening drying times.

**button**

- See "Delay start".

**Coin operation**

If your machine has a payment system, the amount of credit required will appear in the display.

Opening the door or cancelling the programme after it has started may cause loss of credit (depending on how the machine was set up).

**Start the programme**

The indicator for the *Start button* will flash as soon as a programme can be started.

- Press the *Start button*.
  - *Prog. running* will appear in the display, followed by *Drying* and the programme duration.
  - With programmes with drying levels, e.g. *Machine iron*, *Hand iron* etc., the drying level reached will be shown in the display later on.

**Changing the programme sequence**

Further information about the following can be found under "Changing the programme sequence":

- Coin box
- Changing a programme once it has started
- Cancelling the current programme
- Adding or removing laundry after a programme has started
- Power cuts
- Time left

**Programme duration/Estimated time left**

When a programme is selected, the estimated duration will appear in the display. Please be aware that it is only an estimate!

The following factors all affect the estimated time remaining: residual moisture content after spinning; type of fabric; size of load; room temperature; fluctuations in power supply.

The electronics assess conditions in the dryer and adjust the estimated time remaining for a more accurate reading. Because of this, the time displayed can alter during the course of a programme.
Before the end of a programme

There is a cooling down phase at the end of the drying sequence: *Cooling down* will appear in the display. The programme will not finish until the cooling down phase has been completed.

There is no cooling down phase at the end of the following programmes: *Woollens handcare, Smoothing*.

Do not switch the tumble dryer off before the end of the drying programme.

Remove the laundry when the programme has finished

*Anti-crease* (if activated) and *Finish* will appear in the display to indicate that the programme has finished.

Please note:

- To avoid creasing, during the anti-crease phase the drum will continue to turn at intervals until the laundry is removed. The anti-crease phase is not activated in the following programmes; *Woollens handcare, Basket* programmes.
- The dryer will switch off automatically 15 minutes after the end of a programme/the end of the anti-crease phase.

It is advisable to remove laundry as soon as the programme has finished.

Open the door.

Remove everything from the drum.

Check that all items have been removed from the drum. Anything left in the dryer could be damaged by overdrying when it is next used.

The drum lighting will come on when the door is opened. It will go out a few minutes later to save energy.

Press the *On/Off* button briefly to switch off the machine.

The display will go out.

Close the door.

Maintenance after each drying programme

Please see "Cleaning and care" for details.
Depending on the Delay start setting, you can set the time you wish a programme to finish or start at, or you can delay the start of the programme. Factory default: Delay start not activated.

To select Delay start
- Select the programme you want and then press the button.

Example: The display will show the current time of day at the top, the time the programme will start in the middle and the time the programme will finish at the bottom.

To begin delay start
- Press the Start button.

The delay start time will now count down in minutes until the start of the programme. The drum will turn briefly every hour to help prevent creasing.

Changing the programme sequence
While the Delay start time is counting down, you can still . . .
. . . select the Low temperature option or another drying level.
. . . press the Door button and add or remove laundry. After closing the door, press the Start button.

To alter delay start
- Press the button.
- Use the - or + button to alter the time.
- Confirm your selection by pressing the OK button.

To delete Delay start
- Press the button.
- Press and hold the – button until the time stops reducing.
- Confirm your selection by pressing the OK button.

The programme will now start immediately.

To cancel Delay start
- Turn the programme selector to Finish.

Changing the programme sequence

Payment system

Opening the door or cancelling the programme after it has started may cause loss of credit (depending on how the machine was set up*).

* A Miele service technician can re-set the payment system so that programming changes can be made within a specified time period.

Changing a programme once it has started

You cannot change to another programme once a programme has started (this prevents unintentional alterations). If the programme selector is altered, the words Programme cannot be changed appear if the selector is not turned back to the original programme.

You will need to cancel the current programme before you can select a new one.

 Cancelling the current programme

- Turn the programme selector to Finish.

  When Finish appears in the display, this shows that the programme has been cancelled.

- Open the door.
- Close the door.
- Select a new programme.
- Press the Start button.

Adding or removing laundry after a programme has started

⚠️ The laundry, the drum and the back of the machine all become very hot during operation. Take care when in the vicinity of the machine, when opening the door and handling freshly dried laundry. Danger of burning.

- Press the Door button.
- Open the door.
- Add or remove items as required.
- Close the door.
- Press the Start button.

Power cuts

- If the dryer is switched off during a drying programme or there has been a power cut:

  - When the power is restored and/or the machine is switched on again, confirm with OK and start the programme again.

Time remaining

The time left shown in the display may now vary from the actual drying time.
Cleaning the fluff filter

The fluff which is created by the drying process is collected in the fluff filter in the door. Clean the filter after each drying cycle*.

Cleaning the filter whilst dry

- Open the door and pull the fluff filter (1) out as illustrated.
- Use your fingers or a vacuum cleaner to remove the fluff from the surface of the filter.
- Remove any fluff from the hollow part of the door opening. You could also use a cleaning brush which is available as an optional extra from your Miele dealer or the Miele Spare Parts Department, or use a vacuum cleaner.
- Also clean the door seal (2) with a damp cloth.

Cleaning the filter with water

If there is a great deal of compacted fluff on the filter, it can be removed and cleaned under hot running water.

- Rinse the filter under hot, running water.
- Dry the filter carefully and thoroughly.

Replacing the filter

- Once clean and dry, push the filter back into the door holder until it clicks into position. Ensure it is facing the correct way.
- Close the door.

⚠️ The fluff filter should be checked and cleaned regularly, but always clean immediately if the Clean out airways message appears.
Cleaning and care

Cleaning the grilles in the drum aperture

Clean the grilles in the drum aperture and also the airways underneath them from time to time.

- Turn dial 1 on each grille until you hear it click.
- Take hold of the dial, and pull the grille out as shown 2. Do the same on the other side.
- Clean them under hot running water, and dry thoroughly.
- Also clean the airways underneath each one with a vacuum cleaner, for example.
- Replace them by inserting them at the bottom and pressing them into place at the top.
- Lock both dials (you will hear them click).

Cleaning the tumble dryer

- Disconnect the machine from the mains electricity supply.
- Do not use solvents, abrasive cleaners, glass cleaners or all-purpose cleaners. These could damage plastic surfaces and other parts.
- The machine must never be hosed down.
- Clean the housing and the control panel with a slightly damp cloth and a mild detergent or soapy water.
- The drum and other stainless steel parts can be cleaned with a suitable proprietary stainless steel cleaner following the manufacturer's instructions.
- Dry all parts with a soft cloth.
Problem solving guide

With the help of the following notes minor faults in the performance of this dryer, some of which may result from incorrect operation, can be put right without contacting the Service Department.

Repair work to electrical appliances should only be carried out by a suitably qualified person in accordance with current local and national safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.

Fault messages in the display

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>⚠️ Adjust the load</td>
<td>This is not a fault. The electronic unit has recognised that there is no laundry in the drum and cancelled the programme. Drying individual garments or items which are already dry can also cause the programme to be cancelled.</td>
<td>Use the Warm air programme (timed drying) to dry individual items. To delete the fault message: – Open the door.</td>
</tr>
<tr>
<td>⚠️ Technical Fault</td>
<td>No obvious cause. In some circumstances, Clean out airways will have appeared in the display already.</td>
<td>– See next page: Clean out airways.</td>
</tr>
<tr>
<td>⚠️ Technical Fault</td>
<td>You cannot start another programme whilst this message shows in the display.</td>
<td>– Follow the instructions in the display. – Try to start the programme again.</td>
</tr>
</tbody>
</table>
## Problem solving guide

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Power failure</strong>&lt;br&gt;Programme stopped</td>
<td>If the dryer is switched off during a drying programme or there has been a power cut:</td>
<td>– After switching the dryer on / power has been restored, confirm with <strong>OK</strong> and start the programme again.</td>
</tr>
</tbody>
</table>
| **Clean out airways**<br>or<br>**Clean the filters appears at the end of the programme or after a programme has been cancelled.** | The dryer is not working efficiently or economically. Possible cause: A build-up of fluff or detergent residues. | – Cleaning the fluff filter is usually all that is required. **However, if the Clean the airways message does not go out after you have cleaned the filter, then also check all the possible causes described under "The drying process goes on too long or even switches off".**<br><br>To delete the fault message:  
  – Open and close the door, or confirm with **OK**. |
| **The vent ducting may be very long, which does not constitute a fault.** | If very long ducting is used, then programme times will be longer and energy consumption higher. | – You can adjust the setting which controls if or when the check message appears.  
  – See "Settings menu ↪, Clean the airways". |
| **Programme cannot be changed** | An attempt has been made to alter a programme while it is in progress. | – You will need to cancel the current programme before you can select a new one. |
## Problem solving guide

### An unsatisfactory drying result

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| **The laundry is not sufficiently dry.** | The load consisted of different fabrics. | – Finish drying using the *Warm air* programme.  
– Select a different programme next time (see "Programme chart"). |
| **Feather filled pillows smell after drying.** | Feathers are a natural product and this is quite normal. | The smell will dissipate after sufficient airing. |
| **Items made of synthetic fibres are charged with static electricity after drying.** | Synthetic fibres tend to attract static charge. | Static charge can be reduced by adding a fabric conditioner to the final rinse in the washing programme or a fabric conditioner sheet to the load when drying. |
| **There is a build-up of fluff.** | Fluff is principally the result of friction when garments are being worn and to some extent when they are being washed. Machine drying causes hardly any fluff to form and has no appreciable effect on the lifetime of the fabric. | Fluff is collected by the fluff filter and can be easily removed (see "Cleaning and care"). |

</tbody>
</table>
Changing the lamp

Disconnect the tumble dryer from the mains electricity supply.

Open the door.

You will find the interior lamp cover at the top of the drum aperture.

Insert a suitable tool, such as a wide bladed screwdriver, under the side edge of the lamp cover as illustrated.

Apply a little pressure and whilst doing so turn your wrist in the direction of the arrow to open the cover.

The cover will open downwards.

The temperature resistant lamp should only be ordered from your Miele dealer or the Miele Spare Parts Department.

Replace the lamp.

To close the cover push it upwards and press it on the left and right until you hear it click into position.

Ensure that it is fitted into position securely, as any moisture could cause a short circuit.

The lamp specification and maximum wattage is stated on the data plate and on the lamp cover.
Repairs
In the event of any faults which you cannot remedy yourself, or if the tumble dryer is under guarantee, please contact

– your Miele Dealer

or

– the Miele Service Department (see back cover for contact details).

When contacting the your Dealer or the Service Department, please quote the model and serial number of your dryer both of which are shown on the data plate.

PC / Optical interface

The indicator or check light marked PC on the fascia panel is the interface used by Miele service technicians during servicing work for testing purposes and for updating the machine’s programme data.

Optional accessories

Optional accessories for this dryer are available from your Miele Dealer or from the Miele Spare Parts Department.
Installation and connection

Front view

1 Vent ducting
2 Mains connection cable
3 Control panel
4 Door
5 Four height adjustable screw feet
6 Plinth
7 Fixing bracket (for installing on a concrete plinth)
Protruding lid (see arrows) for holding when moving the machine

Steel plinth base (optional accessory, available open or closed)

The tumble dryer can be combined with a Miele washing machine in a washer-dryer stack. A stacking kit is required which can be purchased from Miele. The stacking kit must be fitted by a Miele authorised service technician.
Installing the tumble dryer

⚠️ Make sure the dryer door can be opened without hindrance after installation.

Transporting the dryer to its installation site

When moving the dryer hold it by the lid where it protrudes to the rear. To manoeuvre the dryer out of its packing case to its installation site you will also need to hold it by the front feet.

⚠️ Ensure the tumble dryer is stable during transportion.

Levelling the machine

The machine must be perfectly level to ensure safe and proper operation.

- The screw feet can be adjusted to compensate for any unevenness in the floor.
Installation and connection

⚠️ A ventilation gap of 10 mm must be maintained between the base of the machine and the floor. It must not be blocked by deep pile carpets, plinths, etc, which would prevent a sufficient intake of cold air.

This tumble dryer is not suitable for building under.

Securing the tumble dryer against slippage

⚠️ Secure both front feet on the dryer using the fixing brackets supplied.

Payment system

The dryer can be fitted with a payment system (optional accessory). This must be connected and programmed by a Miele Service technician.

Coins/tokens must be removed from the payment system regularly, otherwise it will become blocked.

– Note for service technician:

⚠️ When connecting to a payment system, the plug connector on the push button switch (see wiring diagram) must be disconnected from its position ex-works and reconnected to the position for payment system operation. Failure to do this can cause the payment system to malfunction.
### Electrical connection

⚠️ All electrical work must be carried out by a suitably qualified and competent person in accordance with current local and national safety regulations (BS 7671 in the UK).

This machine is supplied with a connection cable without a plug for connection to a suitable connection socket or isolator switch.

The machine must only be operated with the voltage, frequency and fuse rating shown on the data plate supplied with the machine. Please ensure these match the site mains supply.

We recommend connecting the machine to the power supply via an IP44 plug and socket which must be easily accessible for servicing and maintenance work after the machine has been installed.

For hard-wired machines, connection must be made via a suitable mains switch with all-pole isolation which when in the off position ensures a 3 mm gap between all open contacts.

For extra safety and protection we recommend connecting the machine by a 30 mA residual current device (RCD).

An electrical safety test must be carried out after installation and after any service work.

The mains connection cable may only be replaced by an original Miele spare part.

⚠️ If the machine is disconnected from the electricity supply adequate measures must be taken to ensure that the machine cannot be reconnected to the electricity supply until all work has been carried out.

⚠️ This machine can be converted to a different voltage. Please observe the switching instructions given on the wiring diagram. Conversion may only be carried out by a Miele authorised service dealer or Miele technician. If the machine has been converted the heater rating must also be adapted.

⚠️ The machine must be permanently connected to the electricity supply to enable the programme to complete and to enable the load to cool down after drying. For this reason, it must not be connected to devices such as timers which would switch it off automatically.

**WARNING**

THIS MACHINE MUST BE EARTHED
Installation and connection

Single phase AC 230 V - country variant

This device is intended for connection to a power supply system where the maximum value of external phase neutral loop impedance \( Z_{\text{max}} \) of 0.39 Ohms at the point of distributor supply connection is not exceeded. If in doubt, please ask your electrical distributor for actual \( Z_{\text{max}} \) value. The user has to ensure that this device is connected only to a power supply system which fulfils the requirement above.
Before operating the tumble dryer, a suitable ducting system must be installed to carry the moist air from the dryer to the outside.

The dryer must be disconnected from the mains electricity supply whilst the ducting system is installed.

The venting outlet (e.g. in a wall) should be installed in such a way that the moist expelled air:

- cannot be drawn back into the room in which the dryer is installed;
- . . . cannot cause any damage to the building or other nuisance.

The dryer uses the room air. It is therefore essential to ensure adequate ventilation to avoid the danger of asphyxia and toxic fumes caused by gases given off by other appliances being drawn back into the room. Insufficient ventilation will also cause drying times to be considerably longer. Ventilation can be maintained by:

- an open window,
- air inlets in the external wall (approx. 237 cm²) which cannot be closed or blocked, or
- a window contact which prevents the dryer being used when the window is closed.

Avoid:
- very long ducting systems.
- too many tight bends or corners.
Otherwise the drying result will be less effective, and it will take longer and use more energy.

Suitable materials
- for the ventilation ducting: flexible ducting* or plastic piping with a diameter of at least 100 mm.
- for venting to the outside: a wall vent kit* or a window vent kit*.

(* optional extras)
To calculate the total duct length

Friction against the inner walls of the vent ducting will slow down the expelled air as it passes through the ducting. An elbow, bend, non-return flap or wall vent creates more friction than a straight duct. The friction created by each of these is expressed as an **additional duct length factor**. The additional duct length factors are calculated by comparing the friction created by, for example, an elbow to that created by 1 metre of straight plastic piping (see Table 1).

The additional duct length factor for each item needs to be added together to ascertain the **total duct length** which will be needed for the venting system. The total duct length is a means of calculating the friction created by the venting system as a whole.

A larger **internal duct diameter** also helps reduce friction. If the total duct length is **more than 20 m**, the duct diameter should be increased (see Table II).

**To calculate the total duct length**

1. First measure the distance requiring straight ducting. Multiply this amount by the corresponding additional length factor in **Table I**.

2. Establish the number of angles, bends etc., and add their additional length factors together with the help of **Table I**.

3. Add all the additional length factors to give the total duct length.

4. Refer to **Table II** for the appropriate duct diameter required.

---

**Table I**

<table>
<thead>
<tr>
<th>Component</th>
<th>Additional duct length factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flexible ducting*</td>
<td></td>
</tr>
<tr>
<td>– 1 m laid straight</td>
<td>1.8 m</td>

<tr>
<td>– 45° angle</td>
<td>1.5 m</td>
</tr>
<tr>
<td>(Bend radius = 0.25 m)</td>
<td></td>
</tr>
<tr>
<td>– 90° angle</td>
<td>2.5 m</td>
</tr>
<tr>
<td>(Bend radius = 0.25 m)</td>
<td></td>
</tr>
<tr>
<td>Flexible aluminium ducting*/plastic piping</td>
<td></td>
</tr>
<tr>
<td>– 1 m laid straight, or 1 m straight pipe</td>
<td>1.0 m</td>
</tr>
<tr>
<td>– 45° angle</td>
<td>0.6 m</td>
</tr>
<tr>
<td>(Bend radius = 0.25 m)</td>
<td></td>
</tr>
<tr>
<td>– 90° angle</td>
<td>0.8 m</td>
</tr>
<tr>
<td>(Bend radius = 0.25 m)</td>
<td></td>
</tr>
<tr>
<td>Wall vent kit* or window vent kit*</td>
<td></td>
</tr>
<tr>
<td>– with louvred grill</td>
<td>3.8 m</td>
</tr>
<tr>
<td>– with non-return flap (hinged flap)</td>
<td>1.5 m</td>
</tr>
<tr>
<td>Non-return flap* integrated into the vent ducting</td>
<td>14.3 m</td>
</tr>
<tr>
<td>Flat ducting (for washer-dryer stack)*</td>
<td>11.0 m</td>
</tr>
<tr>
<td>Venting connection to the left/right</td>
<td>1.0 m</td>
</tr>
</tbody>
</table>

* optional accessory

---

**Table II**

<table>
<thead>
<tr>
<th>Maximum total duct length allowable</th>
<th>Internal duct diameter required</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 m</td>
<td>100 mm</td>
</tr>
<tr>
<td>40 m</td>
<td>125 mm</td>
</tr>
<tr>
<td>80 m</td>
<td>150 mm</td>
</tr>
</tbody>
</table>
Calculation example

A Wall pipe, with louvred vent
   = 1 x 3.8 m Additional duct length = 3.8 m

B/D 2 bends, 90°
   = 2 x 0.8 m Additional duct length = 1.6 m

C 0.5 m plastic piping
   = 0.5 x 1 m Additional duct length = 0.5 m

E Side connection, left
   = 1 m Additional duct length = 1.0 m

Result: A duct diameter of 100 mm is adequate as the total duct length is less than the 20 m specified in Table II.

Installation to the rear, left or right hand side of the machine

To the rear
The connection is opened at the factory.
- Fit one of the venting systems described on the following pages.

To the left or right side of the machine.
- Turn the cover flap anti-clockwise.
- Refit it securely in the rear outlet.
- Fit one of the venting systems described on the following pages.
**Venting system with plastic piping**

An adapter for installing piping is supplied with the dryer. Plastic piping is a good option where the vented air has to be ducted for some distance. The smooth walls of the pipe are less resistant to vented air than the walls of a flexible vent hose, for example. Time and energy consumption are better with plastic piping.

The following items are required:
- an adapter (supplied)
- a wall vent kit* or window vent kit* (* optional accessories)
- suitable plastic piping, available from your dealer or builders' merchant. Where the pipe diameter is more than 100 mm, an adapter is necessary (e.g. 100 to 125 mm) to connect the pipe to the dryer.

The piping (2) is connected to adapter (1) which is fitted into the vent opening on the dryer.

**Example**

1. Wall vent kit (separate fitting instructions are supplied with the Miele wall vent kit)
2. Adapter
3. Plastic piping, diameter DN 100
Venting system with flexible ducting

This is a simple method of directing the moist air outside using an adapter*.

The following items are required:
- flexible ducting hose*
- an adapter* for flexible ducting hose
- a wall vent kit* or window vent kit*.

(* optional accessories)

The ducting (2) is connected to adapter (1) which is fitted into the vent opening on the dryer.

Example

Window vent

1. Window vent kit (fitted in a "plexiglass" pane)
   (separate fitting instructions are supplied with the Miele window vent kit)

2. Adapter for flexible ducting hose
Connection to an exhaust flue

1. Pipe with connection piece
   (= supplied with wall vent kit)
2. Adapter for flexible ducting hose
3. Exhaust flue insulated against damp

⚠️ The exhaust air must not be vented into a chimney or vent flue which is in use, nor should it be connected to ducting which ventilates rooms with fireplaces.
Main venting duct

⚠️ There must be one non-return flap per dryer installed directly on the main venting duct R. Additional Miele accessories* are required for this purpose, otherwise the dryers could be damaged and their electrical safety compromised.

Where three to five dryers are being installed, the pipe diameter D must be increased.

Changing default settings

Default settings can be altered to adapt the tumble dryer to different requirements.

Depending on the programmable status, the Settings/Supervisor level menu can be locked with a code to prevent it being accessed by unauthorised personnel (the Language setting can still be altered).

– Code not required
  - Some of the settings may be changed.
– Code required
  - All of the settings may be changed.

Please contact Miele for details.

Note:

The tumble dryer must be commissioned as described at the beginning of this booklet.
**Settings menu**

**Opening the Settings menu**

If the *Settings* menu is not locked, some of the settings may be changed.

1. The entry menu showing the current time of day will appear after the dryer has been switched on, until you select a programme.

2. Press the *OK* button.

3. This will take you into the *Settings* menu.

**Selecting a setting**

4. Use the + and − buttons to select the setting you want, and confirm your selection by pressing the *OK* button.
   - The arrow ▼ in the display indicates that there are further options.
   - If you do not make a selection in the *Settings* menu and in its sub-menus within approx. 15 seconds, the display will revert to the previous menu.

**Closing the Settings menu**

Select *Back* and confirm your selection with the *OK* button.

**Opening the Settings menu via the Supervisor level**

The *Settings* menu can be locked against unauthorised use (except for the Language option). It will then only be able to be accessed at Supervisor level by entering a code.

**To enter the code**

Confirm *Access via code*.

Enter the code *000* (factory default setting). If you enter the code wrongly three times, you will be locked out of the Supervisor level for an hour.
Enter code

- Use the + button to enter the first number.
- Confirm your selection of this number by pressing the OK button.
- Now enter the second number.
- Repeat the process until all three numbers have been entered.

To confirm the code

- Confirm the code with OK (Yes is highlighted).

To correct the code

- Press the + button so that No is highlighted.
- Confirm by pressing the OK button.
- Enter the correct code.

To change the code

- See the "Supervisor level" setting.

Language

You can select the language displayed via the Languages sub-menu.

The flag after the word Language acts as a guide to prevent a language which will not be understood from being set.

Supervisor level

You can alter the access code to the supervisor level.

- Enter the old code.
- Enter a new code.

After you have confirmed the new code, the display will change to the beginning of the Settings menu.
Anti-crease

At the end of the programme the drum can be set to rotate at intervals for one or two hours to prevent laundry creasing, if you do not wish to remove it immediately.

- Factory default: Off.
- 1 h
- 2 h

Buzzer

When the buzzer function has been activated, an audible tone sounds at the end of a programme.

- Off (factory default)
  The buzzer will still sound if there is a fault even if it has been deactivated.
- Normal
  The buzzer sounds at the end of a programme.
- Loud
  The buzzer sounds at maximum volume at the end of a programme.

Time of day

First select whether you want the clock displayed as a 24 hour or 12 hour clock, or to not display it at all. Then set the current time of day.

- 24 h clock or 12 h clock
  Once the clock display has been selected, the time of day can be set.

To set the time of day:

- Set the hour with the – and + buttons, and confirm your selection by pressing the OK button.
- Now set the minutes and confirm your selection.

- Time not displayed
  If Delay start is activated (see Settings Delay start), then the timer will only show the option Start in or Finish in in hours/minutes.

Display contrast

Display brightness

There are ten different display contrast and display brightness settings.

The bars show you the setting.

- Factory default: level 5
Standby

To save energy, the display goes out after 10 minutes and the indicator light for the Start button flashes slowly.

The display is switched on again by moving the programme selector or touching one of the buttons, without any effect on any programme that is running.

- On
  Standby comes on:
  . . . if a programme is not selected.
  . . . after the Start button has been pressed in a programme that is running.
  . . . after the end of a programme.

- Not in current prog.
  (default setting)

  Standby is activated if no programme selection is made after the end of a programme - but not during a programme that is running.

Extended cool down

The cooling down phase which takes place before the end of a programme can be lengthened if required. This makes the garments easier to handle.

The bars show you the setting.

- from 0-18 mins.
- Factory default: 0 mins (normal cooling down period)

The programme duration will increase accordingly.

You cannot extend the cooling down time for the Warm air, Cool air, Woollens handcare or Smoothing programmes.

Drying levels

Cottons

Please note: Changing the settings for drying levels in the Settings menu will also affect the Cottons programme.

Minimum iron

You can alter the drying levels for the Cottons and Minimum iron programmes.

The bars show you the setting.

- from drier to
- damper
- Factory default: level 4

Machine iron

The drying level Machine iron can be altered separately in the Cottons programme.

- from drier to
- damper
- Factory default: level 7
Clean out airways

The electronic unit in the dryer detects the degree of a blockage caused by fluff or detergent residues in the fluff filter or ducting, and the following prompt comes up in the display: Clean out airways. You can decide at what level of fluff this message should appear.

You will have an idea of how often this should be done after a few drying programmes.

- **Off**
  
  *Clean out airways* does not appear.
  
  In cases of a very severe blockage in the ducting, the programme is cancelled and the message *Clean out airways* comes up regardless of this option.

- **Heavy**
  
  *Clean out airways* only appears when there is a heavy build-up of fluff.

- **Normal**
  *(Factory default setting)*

- **Light**
  
  *Clean out airways* appears when there is only a small build-up of fluff.

Delay start

You can set a later start time using Delay start (see "Delay start"). You can decide how this time is displayed.

- **Programme end**
  
  The finish time for the programme is selected.

- **Programme start**
  
  The start time for the programme is selected.

- **Time until start**
  
  The time to the start of the programme is selected in minutes/hours.

- **Off**
  *(Factory default)*

  By pressing the button, the time remaining and the finish time for the programme is displayed.
