Operating and installation instructions
Frost free fridge freezer

To avoid the risk of accidents or damage to the appliance, it is essential to read these instructions before it is installed and used for the first time.

On/Off sensor for the whole appliance and On/Off sensor for switching the PerfectFresh zone on and off separately

Super cool and Super freeze sensor

Sensor for setting a lower temperature (V)

Safety lock indicator light (only visible when the Safety lock is activated)

Temperature display for the PerfectFresh zone and freezer section

Sensor for switching between the PerfectFresh zone and the freezer section (top = "PerfectFresh" symbol; bottom = "Freezer" symbol)

Sensor for setting a higher temperature (∧)

Alarm off sensor (only visible when the door or temperature alarm sounds)

Change active charcoal filter indicator (only visible when the active charcoal filters need to be changed)
Guide to the appliance

A PerfectFresh zone - Dry compartment
1 Bottle rack
2 Adjustable shelf
3 Active charcoal filter holder

B PerfectFresh zone - Humidity controlled compartments
4 Regulator for setting the moisture level in the humidity controlled compartments
5 Humidity controlled compartments
6 Condensate channel and drain hole

C Freezer section
7 Ice cube drawer with automatic ice cube maker
8 Freezer drawers with freezer calendar
Disposal of the packing material

The transport and protective packing has been selected from materials which are environmentally friendly for disposal, and should be recycled.

Ensure that any plastic wrappings, bags etc. are disposed of safely and kept out of the reach of babies and young children. Danger of suffocation!

Disposal of your old appliance

Electrical and electronic appliances often contain materials which, if handled or disposed of incorrectly, could be potentially hazardous to human health and to the environment. They are, however, essential for the correct functioning of your appliance. Please do not therefore dispose of it with your household waste.

Please dispose of it at your local community waste collection / recycling centre or contact your dealer for advice. Ensure that it presents no danger to children while being stored for disposal.

Take care not to damage the pipework at the back of it before or during transportation to an authorised collection depot. In this way, refrigerant in the pipework and oil in the compressor will be contained, and will not leak out into the environment.
**Warning and Safety instructions**

This appliance complies with all relevant safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the appliance, please read these instructions carefully before installation and before using it for the first time. They contain important information on its safety, installation, use and maintenance. Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.

Keep these instructions in a safe place and ensure that new users are familiar with the content. Pass them on to any future owner.

**Correct application**

- The appliance is not designed for commercial use. It is intended for use in domestic households and similar working and residential environments. This appliance is not intended for outdoor use.

- The appliance must only be used as a domestic appliance to cool and store food as well as to store deep frozen food, freeze fresh food and to prepare ice. Any other usage is not supported by the manufacturer and could be dangerous.
The appliance is not suitable for storing and keeping cool medicines, blood plasma, laboratory preparations or other such materials or products. Incorrect use of the appliance for such purposes can cause deterioration of the items stored. The appliance is not suitable for use in areas where there is a risk of explosion. Miele cannot be held liable for damage resulting from incorrect or improper use or operation.

The appliance can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, if they are supervised whilst using it, or have been shown how to use it in a safe way and understand the hazards involved.

Safety with children

Children under 8 years of age must be kept away from the appliance unless they are constantly supervised.

Children 8 years and older may only use the appliance without supervision if they have been shown how to use it in a safe way and understand the hazards involved.

Children must not be allowed to clean or maintain the appliance unsupervised.

This appliance is not a toy! To prevent the risk of injury, do not allow children to play with it or use the controls. Please supervise children whilst you are using the appliance.

Danger of suffocation. Packaging, e.g. cling film, polystyrene and plastic wrappings, must be kept out of the reach of babies and children. Whilst playing, children could become entangled in packaging or pull it over their head and suffocate.
Warning and Safety instructions

Technical safety

➤ Before setting up the appliance, check it for any externally visible damage. Do not install and use a damaged appliance. It could be dangerous.

➤ If the connection cable is faulty it must only be replaced by a service technician authorised by the manufacturer to protect the user from danger.

R600a

➤ This appliance contains the coolant Isobutane (R600a), a natural gas which is environmentally friendly. Although it is flammable, it does not damage the ozone layer and does not increase the greenhouse effect. The use of this coolant has, however, led to a slight increase in the noise level of the appliance. In addition to the noise of the compressor, you might be able to hear the coolant flowing around the system. This is unavoidable, but does not have any adverse effect on the performance of the appliance.

Care must be taken during the transportation and installation of the appliance that no parts of the cooling system are damaged. Leaking coolant can damage the eyes.

In the event of any damage:
– avoid open flames and anything which creates a spark,
– disconnect from the mains,
– air the room in which the appliance is located for several minutes and
– contact the Service Department for advice.
The more coolant there is in an appliance, the larger the room it should be installed in. In the event of a leakage, if the appliance is in a small room, there is the danger of combustible gases building up. For every 8 g of coolant at least 1 m³ of room space is required. The amount of coolant in the appliance is stated on the data plate inside the appliance.

Safe operation of the appliance is only assured if it has been installed and connected in accordance with these operating and installation instructions.

Before connecting the appliance, make sure that the connection data on the data plate (voltage and frequency) matches the mains electricity supply. This data must correspond in order to avoid the risk of damage to the appliance. Consult a qualified electrician if in any doubt.

Do not connect the appliance to the mains electricity supply by a multi-socket adapter or an extension lead. These do not guarantee the required safety of the appliance (e.g. danger of overheating).

The electrical safety of this appliance can only be guaranteed when it is correctly earthed. It is most important that this basic safety requirement is observed and regularly tested and where there is any doubt, the household wiring system should be inspected by a qualified electrician. The manufacturer cannot be held liable for damage or injury caused by the lack of or inadequacy of an effective earthing system (e.g. electric shock).

Installation, maintenance and repairs may only be carried out by a suitably qualified and competent person in strict accordance with current national and local safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.
Warning and Safety instructions

 shorthand: While the appliance is under guarantee, repairs should only be undertaken by a service technician authorised by the manufacturer. Otherwise the guarantee will be invalidated.

 shorthand: The appliance must be isolated from the electricity supply during installation, maintenance and repair work.

 shorthand: Faulty components must only be replaced by genuine Miele original spare parts. The manufacturer can only guarantee the safety of the appliance when Miele replacement parts are used.

 shorthand: This appliance must not be used in a non-stationary location (e.g. on a ship).

 shorthand: In areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the appliance and its surroundings in a clean condition at all times. Any damage which may be caused by cockroaches or other vermin will not be covered by the guarantee.

 shorthand: The manufacturer cannot be held liable for damage caused by a faulty connection to the mains water supply.

 shorthand: Connection to the mains water supply and any repairs to the ice cube maker must only be carried out by a suitably qualified and competent person.

 shorthand: The ice cube maker is not suitable for connection to a hot water supply.

 shorthand: Before plumbing the appliance in, ensure that it is disconnected from the mains electricity supply.
Correct use

Never handle frozen food with wet hands. Your hands may freeze to the frozen food. Danger of frost burn.

Do not take ice cubes out with your bare hands and never place ice cubes or ice lollies in your mouth straight from the freezer. The very low temperature of the frozen ice or lollies can cause frost burn to the lips and tongue.

Do not refreeze partially or fully defrosted food. Consume defrosted food as soon as possible, as it will lose its nutritional value and spoil if left for too long. Defrosted food may only be re-frozen after it has been cooked.

Do not store explosive materials in the appliance or any products containing propellants (e.g. spray cans). Thermostats switching on may produce sparks which could present a fire hazard. Flammable compounds could explode.

Do not operate any electrical equipment (e.g. an electric ice-cream maker) inside the appliance. Danger of sparking and explosion.

Do not store cans or bottles containing carbonated drinks or liquids which could freeze in the freezer. The cans or bottles could explode. Danger of injury and damage to the appliance.

When cooling drinks quickly in the freezer, make sure bottles are not left in for more than one hour; otherwise they could burst, resulting in injury or damage.

Observe the "use-by" dates given on food to avoid the risk of food poisoning. Storage times will depend on several factors, including the freshness and quality of the food as well as the temperature at which it is stored. Follow the instructions given on the food manufacturer's packaging regarding storage conditions and "use-by" dates.
Warning and Safety instructions

Do not use sharp edged objects to
- remove frost and ice,
- separate frozen foods and remove ice trays.
They will damage the evaporator, causing irreversible damage to the appliance.

Do not place electric heaters or candles in the appliance to defrost it. These will damage the plastic parts. Do not use defrosting sprays or de-icers, as they might contain substances which could damage the plastic parts or which could cause the build-up of gases and pose a danger to health.

Do not use a steam-cleaning appliance to defrost or clean this appliance. Steam could reach electrical components and cause a short circuit.

Do not use any oils or grease on the door seals, as these will cause the seals to deteriorate and become porous with time.

If storing food which contains a lot of fat or oil in the appliance or the refrigerator door, make sure it does not come into contact with plastic components as this could cause stress cracks.

Do not block the ventilation gaps in the appliance as this would impair the efficiency of the appliance, increase the electricity consumption and could cause damage to the appliance.

This appliance is designed for use within certain climate ranges (ambient temperatures), and should not be used outside this range. The climate range for your appliance is stated on the data plate inside the appliance. Installing it in a room with too low an ambient temperature, e.g. a garage, can lead to the appliance switching off for longer periods so that it cannot maintain the required temperature.
Stainless steel appliances

Do not use sticky notes, transparent adhesive tape, masking tape or other types of adhesive on the surface of the door. These damage the surface, causing it to lose its dirt-repellent protective coating.

The high-quality surface of the door is susceptible to scratching. Even fridge magnets can cause scratching.

Transporting the appliance

Always transport the appliance in an upright position and in its original transport packaging to prevent damage in transit.

Danger of injury and damage. The appliance is heavy and must be transported by two people.

Disposal of your old appliance

Before disposing of an old appliance, first make the door latch or lock unusable. This way you will prevent children from accidentally locking themselves in and endangering their lives.

Be careful not to damage any part of the pipework whilst awaiting disposal, e.g. by

- puncturing the refrigerant channels in the evaporator.
- bending any pipework.
- scratching the surface coating.

Splashes of refrigerant can damage the eyes.

Before using for the first time

Packing material

- Remove all the packing material from the interior of the appliance.

Protective foil

On stainless steel appliances, the outer surfaces are also covered with protective foil.

- Do not remove the foil until the appliance has been positioned in its final location.

Cleaning and care

Please observe the relevant instructions in "Cleaning and care".

- On stainless steel appliances also treat the side panels with the Miele stainless steel conditioning agent supplied as soon as you have removed the protective foil. The appliance doors have a special finish which is resistant to soiling. Do not use Miele stainless steel conditioner on the appliance door.

Important. Each time it is used, the Miele stainless steel conditioning agent forms a water and dirt repellent protective coating.

- Clean the inside of the appliance and the accessories with lukewarm water and a little washing up liquid, and then dry with a soft cloth.

Active charcoal filters
(Active Air Clean charcoal filters)

- Place the active charcoal filters supplied in the holder, and place the holder on one of the shelves in the PerfectFresh zone (see "Active charcoal filters").

Operating the appliance

A light touch of the finger on the sensors is all that is required to operate this appliance.

Switching on

The PefectFresh zone and freezer section are switched on together with the On/Off sensor.

- Touch the On/Off sensor until the temperature display lights up.

If the temperatures in the appliance are not within the range that the appliance is able to display, only bars will light up in the temperature displays.

The "PerfectFresh" and the "Freezer" symbols as well as the Alarm off sensor will flash until the temperatures are sufficiently low.

As soon as the temperatures are within the range that the appliance is able to display, the temperature display will show the current temperature.

The appliance will start to cool, and the interior lighting will come on when the PerfectFresh zone door is opened.
To enable the temperature to get sufficiently cold inside the appliance, allow the appliance to run for a few hours before placing food in it. Do not place food in the freezer section until the temperature is at least -18°C.

To switch between the PerfectFresh zone and freezer section touch the relevant sensor.

If you want to select the freezer section (to check the temperature, for example),

- touch the freezer sensor. It will light up yellow.

Depending on which zone/section you have selected, you can
- select either Super cool or Super freeze, or
- adjust the temperature.

Please refer to the relevant section for more information.

**Cool pack**

Place the cool pack in the top freezer drawer. The cool pack will be at its most effective after it has been in the freezer for approx. 24 hours.

**Switching off**

- Touch the On/Off sensor until all of the indicators go out. (If this does not happen, the safety lock is still activated).

If the PerfectFresh zone is switched on, the PerfectFresh zone and the freezer section will switch off one after the other.

The interior lighting will not come on when you open the door and the cooling process will be switched off.

**To switch the PerfectFresh zone off separately**

The PerfectFresh zone can be switched off without having to switch off the freezer section. This is useful e.g. whilst on holiday.

- Select the PerfectFresh zone.

The "PerfectFresh" symbol will light up yellow.
Switching on and off

Touch the On/Off sensor until the "PerfectFresh" symbol goes out.

The interior lighting will not come on when you open the door and the PerfectFresh zone is switched off.

The freezer section remains switched on and the "Freezer" symbol is lit up.

To switch the PerfectFresh zone back on again

Select the PerfectFresh zone. The "PerfectFresh" sensor lights up yellow, then touch the On/Off sensor until the temperature display lights up, or

Switch the appliance off and then back on again.

The appliance will start to cool, and the interior lighting will come on when the PerfectFresh zone door is opened.

Switching off for longer periods of time

If the appliance is not going to be used for a longer period of time, e.g. whilst on holiday:

- switch the appliance off,
- disconnect it from the mains. Switch off at the wall and withdraw the plug from the socket, or disconnect the mains fuse,
- empty and clean the ice cube tray,
- close the stopcock for the water inlet,
- clean the appliance out and
- leave the doors ajar to air the appliance.

If, during a long absence, the appliance is switched off but not cleaned out and the doors are left shut, there is a danger of mould and odours building up inside the appliance.
Settings mode

Certain settings on the appliance can only be selected in the settings mode.

How to select the settings mode and how to change the settings is described in the relevant section of these instructions.

Overview of functions that can be selected in the settings mode:

<table>
<thead>
<tr>
<th>Function</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>To enter or leave the settings mode</td>
<td>c</td>
</tr>
<tr>
<td>To switch the sensor tones on/off (see &quot;Switching on and off&quot;)</td>
<td>b</td>
</tr>
<tr>
<td>To confirm that the active charcoal filters have been changed (see &quot;Active charcoal filters&quot;)</td>
<td>h</td>
</tr>
<tr>
<td>To switch the safety lock on/off (see &quot;Switching on and off&quot;)</td>
<td>u</td>
</tr>
<tr>
<td>To change the brightness of the temperature display (see &quot;The correct temperature&quot;)</td>
<td>d</td>
</tr>
<tr>
<td>To set the water intake time for the ice cube maker (see &quot;Making ice cubes&quot;)</td>
<td>e</td>
</tr>
</tbody>
</table>

The door alarm is automatically disabled when the appliance is in the settings mode. As soon as the door is closed, the door alarm is activated again.

Switching the sensor tones on/off

The sensor tone which sounds each time a sensor is touched can be deactivated.

- Touch and leave your finger on the V sensor.

- At the same time, briefly touch the On/Off sensor (without letting go of the V sensor).
- Leave your finger on the V sensor for another 5 seconds until c appears in the display.
- Touch the V sensor repeatedly until b appears in the display.
- Touch the On/Off sensor.
- By touching the V sensor, you can now select whether the sensor tones are switched on or off:
  - b 0: Sensor tones are switched off
  - b 1: Sensor tones are switched on
  - b -: Return to menu.

The old setting lights up, and your newly selected setting flashes.

- Touch the On/Off sensor to confirm the new setting.
- Touch the V sensor repeatedly until c appears in the display.
- Touch the On/Off sensor.

You have now left the settings mode.
Activating or deactivating the safety lock

The safety lock can be activated to prevent the appliance being switched off inadvertently.

Touch and leave your finger on the sensor.

At the same time, briefly touch the On/Off sensor (without letting go of the sensor).

Leave your finger on the sensor for another 5 seconds until c appears in the display.

Touch the sensor repeatedly until u appears in the display.

Touch the On/Off sensor.

By touching the sensor, you can now select whether the safety lock is switched on or off:

- u 0: The safety lock is deactivated
- u 1: The safety lock is activated
- u –: Return to menu.

The old setting lights up, and your newly selected setting flashes.

Touch the On/Off sensor to confirm the new setting.

Touch the sensor repeatedly until c appears in the display.

Touch the On/Off sensor.
It is very important to set the correct temperature for storing food in the appliance. Micro-organisms will cause food which is not stored at the correct temperature to deteriorate rapidly. Temperature influences the growth rate of these micro-organisms. Reducing the temperature reduces their growth rate.

The temperature in the appliance will rise:
- the more often the door is opened and the longer it is kept open,
- the more food that is stored in it,
- the warmer the food is which is being put into it,
- the higher the ambient temperature surrounding the appliance.

The appliance is designed for use in specific ambient temperatures (climate ranges). Do not use in ambient temperatures for which it is not designed.

...in the PerfectFresh zone

The temperature in the PerfectFresh zone is controlled automatically, and is maintained at 0 to 2 °C.

Setting the temperature in the PerfectFresh zone

The temperature in the PerfectFresh zone can be raised or lowered, e.g. if you want to use it for storing items like fish.

- Select the PerfectFresh zone.
  The "PerfectFresh" symbol will light up yellow.

- You can now adjust the temperature in the PerfectFresh zone by touching the sensor. You can choose from settings b1 to b9:
  b1: Lowest temperature,
  b9: Highest temperature.

By touching the
∇ sensor: the temperature will get colder
∧ sensor: the temperature will get warmer.

The setting being set will flash in the display.

The following information shows in the display when the sensors are touched:
- Touching a sensor once: the last setting selected flashes.
The correct temperature

- Each subsequent touch of a sensor: changes the setting incrementally.
- Leaving a finger on the sensor: changes the setting continuously.

Approx. 5 seconds after taking your finger off a sensor, the current setting of the PerfectFresh zone is automatically shown.

The settings, b1 to b9 have specific temperature ranges allocated to them. The temperature itself will not appear in the display.

b5 is the default setting for the PerfectFresh zone. If a setting of b1 to b4 is selected, the temperature can fall below 0°C. Food could freeze!

Dynamic cooling

The dynamic cooling fan automatically switches on when the cooling system for the PerfectFresh zone switches on. It distributes the temperature in the PerfectFresh zone to all areas more evenly so that all the food will be chilled to about the same degree.

. . . in the freezer section

To freeze fresh food and to store frozen food for a long time, a temperature of -18 °C is required. At this temperature the growth of micro-organisms is generally halted. As soon as the temperature rises above -10 °C, the micro-organisms become active in the food again so that it cannot be kept as long. For this reason, partially defrosted or defrosted food must not be re-frozen. Food may be re-frozen once it has been cooked, as the high temperatures achieved when cooking destroy most micro-organisms.

Setting the temperature in the freezer section

- Select the freezer section.
- The "Freezer" symbol will light up yellow.

- You can now use the arrow sensors on either side of the temperature display to set the temperature you require.

By touching the

▼ sensor: the temperature will get colder
▲ sensor: the temperature will get warmer.
The correct temperature

The temperature being set will flash in the display.

The following information shows in the display when the sensors are touched:

- Touching a sensor once: the last temperature selected flashes.
- Each subsequent touch of a sensor: adjusts the temperature shown in 1 °C steps.
- Leaving a finger on the sensor: changes the temperature continuously.
  When the highest or lowest temperature in the range is reached, the V or Λ sensor disappears.

Approx. 5 seconds after taking your finger off a sensor, the average, current temperature of the freezer is automatically shown.

If you have adjusted the temperature, wait for approx. 6 hours if the appliance is not very full and for approx. 24 hours if the appliance is full before checking the temperature display, as it will take this long for the display to give an accurate reading. If, after this time, the temperature is still too high or too low, you will need to adjust it again.

Temperature range

The temperature in the freezer section can be adjusted from -14 °C to -28 °C.

The ambient temperature in the room and the installation location can affect the time it takes for the appliance to reach the lowest temperature. If the ambient temperature is too high, the appliance may not reach the lowest temperature.

Temperature display

During normal operation the temperature displays on the control panel show the temperature in the middle of the PerfectFresh zone and the temperature in the warmest part of the freezer section.

Changing the temperature display brightness

The temperature display brightness can be adjusted to suit the lighting conditions of the room.

* Touch and leave your finger on the V sensor.
* At the same time, briefly touch the On/Off sensor (without letting go of the V sensor).
* Leave your finger on the V sensor for another 5 seconds until Λ appears in the display.
* Touch the V sensor repeatedly until d appears in the display.
* Touch the On/Off sensor.
The correct temperature

- The temperature display brightness can now be changed by touching the V sensor:
  - d 0: Maximum brightness
  - d 1: Reduced brightness
  - d –: Return to menu.

The old setting lights up, and your newly selected setting flashes.

- Touch the On/Off sensor to confirm the new setting.

- Touch the V sensor repeatedly until c appears in the display.

- Touch the On/Off sensor.

You have now left the settings mode.
Your appliance has been fitted with a warning system which ensures that the temperature in the freezer section cannot rise unnoticed and to avoid energy being wasted if a door is left open.

**Activating the alarm system**

The alarm system is always active. It does not have to be switched on manually.

**Temperature alarm**

An alarm will sound if the temperature in the freezer section becomes too warm.

The alarm off sensor will flash red and the "Freezer" symbol will flash.

The alarm will sound, the alarm off sensor will flash red and the freezer symbol will flash, for example,

- if a lot of room air enters the freezer section when food is being loaded, rearranged or taken out.
- when freezing large amounts of food at once.
- when freezing food which is still warm.
- in the event of a power cut.

The alarm will stop and the symbols will go out as soon as the temperature has dropped down to the correct level again.

---

**Switching the temperature alarm off early**

If the noise disturbs you, you can switch the alarm off early if you wish.

1. Touch the alarm off sensor.
   The alarm will stop.
   The alarm off sensor and the freezer symbol will continue to flash until the correct temperature has been reached.

However, if the temperature in the freezer section remains above -18 °C for a long time, check that the frozen food has not started to defrost. If it has, check that the food is safe to use and if it is, then use it as soon as possible.
Door alarm

The alarm will sound if a door is left open for more than approx. 2 minutes.

The alarm off sensor will light up red and the symbol for the section which has the opened door will flash.

The alarm will stop and the symbols will go out as soon as the door is closed.

Switching the door alarm off early

If the noise of the door alarm disturbs you, you can switch it off early if you wish.

- Touch the alarm off sensor.
  The alarm will stop.
  The alarm off sensor will light up constantly and the symbol for the section which has the opened door will continue to flash until the door has been closed.
Super cool

The Super cool function can be used to rapidly reduce the temperature throughout the PerfectFresh zone to its lowest setting (depending on the room temperature).

Switching on Super cool

Super cool is particularly recommended for the faster chilling of large amounts of fresh food or drink.

■ Select the PerfectFresh zone.
The "PerfectFresh" symbol will light up yellow.

■ Touch the Super cool sensor. It will light up yellow.

The appliance will then work at full power to lower the temperature in the PerfectFresh zone.

Switching off Super cool

The Super cool function will switch itself off automatically after approx. 6 hours. The appliance will then continue to work at normal power.

To save energy, the Super cool function can be switched off once food and drinks are sufficiently chilled.

■ Select the PerfectFresh zone.
The "PerfectFresh" symbol will light up yellow.

■ Touch the Super cool sensor. It will dim to a pale yellow colour.
The appliance will continue running at normal power.
Super cool and Super freeze

Super freeze

Switch the Super freeze function on before putting fresh food into the freezer section.

This helps food to freeze quickly and retain its nutrients, vitamins, flavours and appearance.

Super freeze is not necessary:
- when placing food in the freezer that is already frozen.
- when freezing less than 2 kg fresh food daily.

Switching on Super freeze

When freezing small quantities of food in the freezer, the Super freeze function should be switched on 6 hours beforehand. When freezing the maximum load of food the Super freeze function should be switched on 24 hours beforehand.

- Select the freezer section. The "Freezer" symbol will light up yellow.
- Touch the Super freeze sensor. It will light up yellow.

The appliance works at full power to lower the temperature in the freezer section.

Switching off Super freeze

Depending on the amount of food placed in the freezer section, the Super freeze function will switch off automatically after approx. 30 to 65 hours. The appliance will then continue to work at normal power.

To save energy, the Super freeze function can be switched off once a constant temperature of -18 °C or colder has been reached in the freezer section.

- Select the freezer section. The "Freezer" symbol will light up yellow.
- Touch the Super freeze sensor. It will dim to a pale yellow colour.

The appliance will continue running at normal power.
Do not store explosive materials in the appliance or any products containing propellants (e.g. spray cans).
Danger of explosion.

If storing food which contains a lot of fat or oil in the appliance, make sure that it does not come into contact with plastic components as this could cause stress cracks or break the plastic.

Food must not touch the back wall of the appliance, as it may freeze to the back wall.

To allow air to circulate efficiently, do not pack food too closely together.

Food which is not suitable for storing in a refrigerator

Not all food is suitable for storing in a refrigerator at temperatures below 5°C as some food is sensitive to cold. The appearance, consistency, taste and / or the vitamin content of certain types of food can be adversely affected by being stored in too cold a place.

Food which does not tolerate cold temperatures includes:

- Pineapples, avocados, bananas, pomegranates, mangos, melons, papayas, passion fruit, citrus fruit (such as lemons, oranges, mandarins, grapefruit),
- Fruit which is not yet ripe, 
- Aubergines/egg plant, cucumbers, potatoes, peppers/capiscum, tomatoes, courgettes/zucchini,
- Some hard cheeses, e.g. Parmesan.

When shopping for food

The freshness of food when first placed in the appliance is an important factor in determining how long it stays fresh, and how long it can be kept in the appliance. Always observe the use-by date and the recommended storage temperature.

Time out of the refrigerator, e.g. during transportation, should be kept to a minimum. For example, do not allow food to stay in a hot car for too long.

Tip: Take a cool bag with you when shopping and on return, place food into the appliance immediately.
The PerfectFresh zone provides ideal storage conditions for fruit, vegetables, fish, meat and dairy products. Food stays fresh considerably longer while retaining both flavour and vitamins.

The temperature in the PerfectFresh zone is maintained automatically at between 0-3 °C. While lower than the temperature in a standard refrigerator, 0-3 °C is the optimum temperature range for storing fresh food which is not sensitive to cold.

The deterioration process is decelerated at this temperature range so food can be stored without loss of freshness for considerably longer than in a standard refrigerator.

The humidity in the PerfectFresh zone can also be regulated to suit the food being stored. Food retains its own moisture if stored at a higher humidity and so does not dry out as quickly. This allows it to stay crisp and fresh for longer.

The PerfectFresh zone is divided into two areas:

- In the top dry compartment the temperature is between 0 - 3 °C and the humidity is not increased 🌧️. Use this compartment to store fish, meat, dairy products and other kinds of food, providing it is wrapped.

- In the lower humidity controlled compartments the temperature is between 0 - 3 °C and depending on the position of the regulator, the humidity is not increased 🌧️ or increased 🌧️. Fruit and vegetables can be stored in these compartments with the humidity increased.

The coldest areas in the PerfectFresh zone are in the humidity controlled compartments.

Remember that the fresher the food when placed in the appliance, the longer it will stay fresh.

Take food out of the PrefectFresh zone approx. 30 - 60 minutes before using it. The aroma and taste do not fully develop until the food has reached room temperature.
Dry compartment

The dry compartment is ideal for storing foods which perish easily, such as
- Fish and seafood;
- Meat, poultry and sausages;
- Salads and lettuce;
- Dairy products, e.g. yoghurt, cheese, cream, quark etc;
- You can also use the dry compartment to store all types of food, providing it is wrapped.

The main advantage of the dry compartment is the low temperature (rather than the humidity). The humidity in the dry compartment is approximately the same as in a standard refrigerator.

Please note that food rich in protein deteriorates faster than other types of food.
Shellfish, for example, deteriorates faster than fish, and fish deteriorates faster than meat.
Always keep these foods covered or wrapped.

Humidity controlled compartments 🌡️, 🌡️

The humidity controlled compartments have a regulator which is used to adjust the relative humidity.

Slide the regulator to the 🌡️ or 🌡️ setting.

Humidity level not increased 🌡️

At the 🌡️ setting, the humidity controlled compartment becomes a dry compartment - the regulator opens the vents in the compartment allowing moisture to escape (see "Dry compartment 🌡️").

Increased humidity 🌡️

With the regulator at the 🌡️ setting, the humidity controlled compartment is suitable for storing fruit and vegetables. The regulator closes the vents in the compartment so that moisture is retained.

The humidity level greatly depends on the type and quantity of food being stored, if stored unwrapped.

The humidity level can be too low if there is only a small amount of food stored in the compartment.

Tip: If you are only storing a small amount of food, wrap it in airtight packaging.

In some circumstances, condensate can occur in the humidity controlled compartment at the increased humidity setting. Use a cloth to remove the condensate.
The following tips may help if you find that food you have stored does not keep well (e.g. food becomes limp or wilts after only being stored for a short time):

- Only use the appliance for storing fresh food. The condition of the food when it is first placed in the appliance is an important factor in determining how long it stays fresh.
- Clean the PerfectFresh compartments before placing food in them.
- Allow very moist food to drain before placing it in the PerfectFresh zone.
- Do not store food which is sensitive to cold in the PerfectFresh zone (see "Food which is not suitable for storing in a refrigerator")
- Select the correct PerfectFresh compartment as well as the correct position for the humidity controlled compartment regulator (humidity not increased or humidity increased).

Increased humidity ♦♦ in the humidity controlled compartment is achieved via the moisture present in the food being stored, i.e. the more food stored in the compartment, the higher the humidity.
If too much moisture has collected on the floor of the compartment and the food has been affected, dry the floor with a cloth and place a rack or similar item in the compartment so that moisture can then drip down.
If the humidity level becomes too low, wrap the food in airtight packaging.

- If you think that the temperature in the PerfectFresh zone is too high or too low, try altering it slightly.
To prevent the risk of freezer burn on food, the temperature must be increased if ice crystals start to form on the floor of the PerfectFresh zone.
Moving the shelves

The shelves can be adjusted according to the height of the food.

- Raise the shelf, and pull it forwards slightly until the notch at the side is in line with the shelf support. It can then be raised or lowered to the required level.

The raised edge at the back must face upwards to prevent food from touching the back of the appliance and freezing to it.

Stoppers prevent the shelves from being dislodged by mistake.

Split shelf

In order to accommodate tall items in the appliance, one of the shelves is divided. The front section can be pushed under the rear section.

- Push the rear half of the glass shelf up slightly from below.
- At the same time, pull the front half of the glass shelf forwards slightly and then push it carefully under the rear half.

To move the split shelf:

- Take both halves of the split glass shelf out,

- fit the two brackets onto the supports on either side at the required height,
- and push the glass shelves in one after the other. The shelf with the raised edge must be at the back.
Adjusting the interior fittings

PerfectFresh zone compartments

The compartments in the PerfectFresh zone are on telescopic rails, and can be removed for filling, emptying or cleaning purposes.

- Pull out the compartment as far as it will go, and then lift it up and out.

Push the runners back in again to avoid injury or damage.

- Carefully pull out the lid between the compartments slightly, and lift it down and out.

- To replace it, insert the compartment lid from beneath into the holders, and push it back into place.

To replace the compartment,

- place it back on the fully extended runners ①. The front of the runners must be right up against the front of the compartment ②.

- Then push the compartment back in ③.
Maximum freezing capacity

To ensure that fresh food placed in the freezer freezes through to the core as quickly as possible, the maximum freezing capacity must not be exceeded. The maximum freezing capacity for freezing within a 24-hour period is given on the data plate: “Freezing capacity ....kg/24 hrs”.

The maximum freezing capacity given on the data plate has been calculated according to DIN EN ISO 15502 Standard.

Freezing fresh food

Fresh food should be frozen as quickly as possible. This way the nutritional value of the food, its vitamin content, appearance and taste are not impaired.

Food which takes a long time to freeze will lose more water from its cells, which then shrink. During the defrosting process, only some of this water is reabsorbed by the cells; the rest collects around the food.

If food is frozen quickly, the cells have less time to lose moisture, so they shrink less. As there is not so much moisture loss, it is easier for the food to reabsorb it during the defrosting process, and very little water collects around the defrosted food.

Storing frozen food

When buying frozen food to store in your freezer section, check

- that the packaging is not damaged,
- the use-by date,
- the temperature at which the frozen food is being stored in the shop. The length of time it can be kept is reduced if it has been stored at a temperature warmer than -18 °C.

Buy frozen food once you have finished the rest of your shopping, and wrap it in newspaper or use a cool bag or cool box to transport it.

Store it in the freezer as soon as possible.

Never re-freeze partially or fully defrosted food. Consume defrosted food as soon as possible as it will lose its nutritional value and spoil if left for too long. Defrosted food may only be re-frozen after it has been cooked.
Freezing and storing food

Home freezing
Only freeze fresh food which is in a good condition.

Hints on home freezing

- The following types of food are **suitable** for freezing:
  Fresh meat, poultry, game, fish, vegetables, herbs, fresh fruit, dairy products, pastry, leftovers, egg yolks, egg whites and a range of pre-cooked meals.

- The following types of food are **not suitable** for freezing:
  Grapes, lettuce, radishes, sour cream, mayonnaise, eggs in their shells, onions, whole raw apples and pears.

- To retain colour, taste and vitamin C, vegetables should be blanched after they have been trimmed and washed.
  To blanch: bring a large saucepan of water to the boil, immerse the vegetables in the fast boiling water for 2-3 minutes, depending on variety. Remove, and plunge into ice-cold water to cool quickly. Drain and pack ready for freezing.

- Lean meat freezes better than fatty meat, and can be stored for considerably longer.

- To prevent chops, steaks, cutlets or rolled meat from freezing together in solid blocks when packed, separate with a sheet of plastic freezer film.

- Do not season fresh foods or blanched vegetables before freezing. Only season cooked food lightly before freezing, but care should be taken as the taste of some spices alters when frozen.

- Do not place hot foods or drinks in the freezer. This causes already frozen food to thaw, and increases the energy consumption considerably. Allow hot foods and drinks to cool down before placing them in the freezer.

Packing

- Freeze food in portions.

Unsuitable packing material
- wrapping paper
- grease-proof paper
- cellophane
- bin bags
- plastic carrier bags

Suitable packing material
- plastic freezer film
- freezer bags
- aluminium foil
- freezer containers

- Expel as much air as possible from bags etc. before sealing them, to prevent freezer-burn on food.

- Close the packaging tightly with
  - rubber bands
  - plastic clips
  - string or bag ties
  - freezer tape.

Freezer bags may also be sealed using home heat sealing kits.

- Make a note of the contents and the date of freezing on the packaging.
Freezing and storing food

Before placing food in the freezer

- When freezing more than 2 kg of fresh food, switch on the Super freeze function some time before placing the food in the freezer (see "Super freeze"). This also helps to prevent food that is already in the freezer from starting to defrost.

Placing food in the freezer

The following maximum capacities must be observed:
- freezer drawer = 25 kg
- glass cold plate = 35 kg

Food to be frozen must on no account touch food which is already frozen to avoid partial thawing.

- Make sure that the packaging and containers are dry to prevent them sticking together when frozen.

- Freezing small amounts of food

Place the food in the upper freezer drawers.

- Place the food flat in the bottom of the drawers so that it freezes through to the core as quickly as possible.

Please note that when removing the drawers, the lowest freezer drawer must always remain in the freezer. When placing food on the glass cold plate make sure it does not obstruct the ventilation gaps at the back. This is important for problem-free operation and normal energy consumption.

- Freezing the maximum amount (see data plate)

- Remove the upper freezer drawers.

- Place the food flat on the upper glass cold plates so that it freezes through to the core as quickly as possible.

Once frozen:

- Place the frozen food in the freezer drawers and push them back into the appliance.

- Large items

If you wish to freeze large items such as a turkey or game, the glass cold plates between the drawers can be removed.

- Remove the upper freezer drawers and carefully lift and slide out the glass cold plates.
Freezing and storing food

Freezer calendar

The freezer calendar on the freezer drawer gives the length of time in months which various foods can be stored for effectively.

Where the storage time given on the packaging differs, follow the advice on the packaging.

2-3 months:
- Cakes, ice cream, stew

3-5 months:
- Fish, mushrooms, bread

6-8 months:
- Pork, veal, poultry

10-12 months:
- Beef, fruit, vegetables

Defrosting

Frozen food can be defrosted in different ways:
- in a microwave oven,
- in an oven using the "Fan" or "Defrost" setting,
- at room temperature,
- in the refrigerator (the cold given off by the frozen food helps to keep the other food cold),
- in a steam oven.

Poultry

It is particularly important to observe food hygiene rules when defrosting poultry. Do not use the liquid from defrosted poultry. Pour it away and wash the container it was in, the sink and your hands. Danger of salmonella poisoning.

Ensure that meat and fish (e.g mince, chicken, fish fillets) do not come into contact with other foods while defrosting. Catch the liquid and dispose of it carefully.

Fruit

should be defrosted at room temperature in its packaging, or in a covered bowl.

Most vegetables can be cooked while still frozen. Just put straight into boiling water or hot fat. The cooking time is slightly less than that of fresh vegetables due to changes in the cell structure.

Never re-freeze partially or fully defrosted food. Consume defrosted food as soon as possible as it will lose its nutritional value and spoil if left for too long. Defrosted food may only be re-frozen after it has been cooked.
Cooling drinks

Do not store cans or bottles containing carbonated drinks or liquids which could freeze in the freezer. The cans or bottles could explode.

When cooling non-carbonated drinks quickly in the freezer, make sure bottles are not left in for more than one hour, otherwise they could burst.

Cool pack

The cool pack prevents the temperature in the freezer rising too quickly in the event of a power cut. This can help to prolong the storage time.

- Place the cool pack in the top drawer of the freezer.

  The cool pack will be at its most effective after it has been in the freezer for approx. 24 hours.

In the event of a power cut:

- Place the frozen cool pack directly on top of the frozen food in the front of the top drawer.

When placing fresh food in the freezer, use the cool pack to separate the fresh food from the food which is already frozen so that the frozen food does not begin to thaw.

The cool pack can also be used in a cool bag to keep food or drinks cool for a short period of time.
For the automatic ice cube maker to operate it must be connected to the mains water supply.

Ice cube maker with integrated ice cube tray

The automatic ice cube maker is located in the ice cube drawer. As soon as the ice cube maker is switched on, the indicator light lights up on the ice cube maker.

An ice cube tray where ice cubes are produced is integrated in the ice cube maker.

The ice cube tray automatically empties into the drawer as soon as ice cubes are produced.

Make sure that the ice cube drawer is empty before switching on the ice cube maker.

- Switch on the freezer section.
- Open the ice cube drawer slightly.
- Press the On/Off button on the ice cube maker. The indicator light will come on.
- Close the ice cube drawer.

Only make normal domestic quantities of ice cubes with the ice cube maker.

The drawer must be completely shut for ice cubes to be produced.

After the appliance is switched on for the first time it can take up to 24 hours for the first ice cubes to drop out of the ice cube maker and collect in the drawer.
The ice cube maker can be switched off independently of the freezer section if you do not want the appliance to make any ice cubes.

If the ice cube maker is switched off, the ice cube drawer can be used as an extra drawer for freezing fresh food and storing frozen food.

To ensure that the water pipes are thoroughly flushed through before use, ice cubes from the first three ice cube making processes must not be consumed. This applies not only to when the appliance is installed for the first time but also if the appliance has been out of use for a longer period (e.g. whilst on holiday).

Making a large amount of ice cubes

The amount of ice cubes which the appliance makes depends on the temperature in the freezer section. The lower the temperature, the more ice cubes are produced within a certain time frame. At a temperature of -18 °C, approx. 1 kg of ice cubes will be produced within 24 hours.

Ice cube production is halted automatically when the ice cube drawer is full.

If you require a large quantity of ice cubes,

- replace the full ice cube drawer with the drawer beside it on the right.

Press the On/Off button on the ice cube maker until the indicator light goes out.

Clean the ice cube tray if the ice cube maker is going to be switched off for a long period of time.

Switching off the ice cube maker

The ice cube maker can be switched off independently of the freezer section if you do not want the appliance to make any ice cubes.
Making ice cubes

Setting the water intake time for the ice cube maker

The size of the ice cubes produced depends on the water pressure present and the water intake time which has been set for the ice cube maker.

If the ice cube maker is only producing small ice cubes the water pressure is low. In order to produce larger ice cubes, the water intake time for the ice cube maker needs to be prolonged.

■ Switch the ice cube maker on.

■ Touch and leave your finger on the V sensor.

■ At the same time, briefly touch the On/Off sensor (without letting go of the V sensor).

■ Leave your finger on the V sensor for another 5 seconds until ε appears in the display.

■ Touch the V sensor repeatedly until ε appears in the display.

■ Touch the On/Off sensor to confirm.

■ Touch the V sensor repeatedly until ε 2 appears in the display.

■ Touch the On/Off sensor again to confirm.

■ The length of the water intake time for the ice cube maker can now be adjusted by touching the V sensor:
  ▪ E 1: Shortest water intake time,
  ▪ E 8: Longest water intake time,
  ▪ E – : Return to menu.

The old setting lights up, and your newly selected setting flashes.

■ Touch the On/Off sensor to confirm the new setting.

■ Touch the V sensor repeatedly until ε - appears in the display.

■ Touch the On/Off sensor to confirm.

■ Touch the V sensor repeatedly until ε appears in the display.

■ Touch the On/Off sensor.

You have now left settings mode.
**PerfectFresh zone**

Condensate and frost can build up on the back wall of the PerfectFresh zone whilst in use. These are automatically removed and defrosted by the appliance.

The condensate is drained away via a channel and drain hole into an evaporation system at the back of the appliance.

Ensure that the condensate channel and drain hole are kept clean and are never blocked so that condensate can flow away without hindrance.

**Freezer section**

This freezer is equipped with a "Frost free" system. The freezer section defrosts automatically.

The moisture generated by defrosting collects in the condenser and is automatically dissipated by the condenser from time to time.

This enables the freezer section to remain permanently ice-free while the food remains frozen. This system will not cause food stored in the freezer to defrost!
Cleaning and care

Make sure that no water can penetrate into the electronic unit or into the light.

Do not let water get into the drainage channel and drain hole when cleaning.

Do not use steam cleaning apparatus to clean the appliance. Steam could reach the electrical components and cause a short circuit.

The data plate located inside the appliance must not be removed. It contains information which is required in the event of a service call.

The stainless steel doors have a special finish which is resistant to soiling. **Do not treat** the doors with stainless steel conditioning agent as this will cause noticeable smearing.

However, do use Miele stainless steel conditioning agent to treat the other stainless steel surfaces of the appliance (available from Miele or www.miele-shop.com).

Unlike stainless steel cleaning agents, the conditioning agent does not contain any abrasive substances and will gently remove soiling. Each time it is used, it forms a water and dirt repellent protective coating.

To avoid damaging the surface of your appliance, do not use:

- cleaning agents containing soda, ammonia, acids or chlorides,
- cleaning agents containing descaling agents,
- abrasive cleaning agents, e.g. powder cleaners and cream cleaners,
- solvent-based cleaning agents,
- stainless steel cleaning agents,
- dishwasher cleaner,
- oven sprays,
- glass cleaning agents,
- hard, abrasive sponges and brushes, e.g. pot scourers,
- melamine eraser blocks,
- sharp metal scrapers.

Before cleaning

- Switch the appliance off.
- Disconnect it from the mains.
- Take any food out of the appliance and store it in a cool place.
- Take out any removable parts, e.g. shelves, for cleaning.
Cleaning the interior and accessories

- Clean the appliance at least once a month using lukewarm water and a little washing-up liquid.

- Clean the interior shelves and drawers by hand. These are **not** suitable for cleaning in a dishwasher.

- Clean the condensate channel and drain hole frequently, so that condensate can drain away unhindered. Use a straw or similar to clear the drain hole, if necessary.

- After cleaning, wipe the interior and accessories with a damp cloth and dry with a soft cloth. Leave the doors open to air the appliance for a short while.

Appliance doors, side panels

Remove any soiling on the appliance doors and side panels immediately. If this is not done, it might become impossible to remove and could cause the surface to alter or discolour.

All surfaces are susceptible to scratching. Contact with unsuitable cleaning agents can alter or discolour the surfaces.

- The surfaces should be cleaned using a solution of hot water and a little washing-up liquid applied with a soft sponge. They can also be cleaned with a damp microfibre cloth (without using any cleaning agent).

- After cleaning, wipe with a damp cloth and dry with a soft cloth.
Stainless steel appliances

- **Appliance doors**

The appliance doors have a high quality, special finish which is resistant to soiling and is very easy to clean.

**Do not use** the following to clean/condition the doors
- stainless steel cleaning agent: this will damage the surface.
- Miele stainless steel conditioning agent: this will cause noticeable smearing.

- **Side panels**

  - Use Miele stainless steel conditioning agent to remove any soiling from stainless steel surfaces.
  - **Make sure** you treat the side panels with Miele stainless steel conditioning agent each time you clean them. This will give them a water and dirt repellent protective coating and help prevent re-soiling.

Cleaning the ice cube tray

Clean the ice cube tray,
- before switching off the ice cube maker for a long time
- regularly, to remove ice and water residues.

The ice cube tray ② cannot be removed and must be cleaned in situ. To clean the tray you need to move it into the cleaning position.

- Switch the appliance on.
- Pull out the ice cube drawer a little way.

- Press the On/Off button ① on the ice cube maker. The indicator light will come on.
Empty the ice cube drawer.

Press the on/off button on the ice cube maker for at least 12 seconds. The indicator light flashes slowly at first then quickly.

Push the ice cube drawer in as far as it will go within the next 60 seconds. You will hear the ice cube tray turn so that it is at an angle.

Wait until the ice cube tray has completed this rotation before continuing.

Then take the ice cube drawer out of the appliance and clean it.

Clean the ice cube tray in the ice cube maker. After cleaning

Press the On/Off button on the ice cube maker.

Push the drawer all the way back into the appliance. You will hear the ice cube tray turn back into position.

The ice cube maker will begin to produce ice cubes again after a maximum of 6 hours.

Discard the first three batches of ice cubes after cleaning. They may contain traces of washing-up liquid and are unsuitable for consumption.

Ventilation gaps

The ventilation gaps should be cleaned regularly with a brush or vacuum cleaner. A build-up of dust will increase the energy consumption of the appliance.

Door seals

Do not use any oils or grease on the door seals as these will cause the seals to deteriorate and become porous over time.

The door seals should be cleaned regularly with clean water, and then wiped dry with a soft cloth.

Metal grille at the back of the appliance

The metal grille at the back of the appliance (heat exchanger) should be dusted at least once a year. A build-up of dust will increase the energy consumption of the appliance.

When cleaning the grille, make sure that the pipework and other components do not get broken or damaged in any way.
Cleaning and care

After cleaning

- Replace all shelves and accessories in the PerfectFresh zone.

- Place food back in the PerfectFresh zone, close the appliance doors, insert the plug in the socket and switch the appliance on.

- Switch on the Super freeze function so that the freezer can cool down quickly.

- Once the freezer has reached the required temperature, place the food back in the freezer drawers and put them back in the freezer.

- Switch off the Super freeze function as soon as the temperature in the freezer is a constant -18 °C or colder.
The active charcoal filters should be changed approx. every 6 months.

When the Change active charcoal filter indicator lights up red, the active charcoal filters need to be changed.

**To change the active charcoal filters**

- Pull the active charcoal filter holder upwards to remove it from the shelf.
- Take out the two filters and fit the new filters into the holder with the protruding edge facing downwards.
- Place the holder in the middle of the raised edge at the back of the shelf, so that it clicks into position.

To confirm the filters have been changed

- Touch the Change active charcoal filter indicator for approx. 2 seconds. The indicator light will go out, and the counter will be reset.

**To delay changing the active charcoal filters**

If you do not have new active charcoal filters, you can order them from your Miele dealer or from Miele.
You can switch off the Change active charcoal filter indicator early, if you would prefer not to have the red indicator showing.

- Touch the Change active charcoal filter indicator for approx. 2 seconds. The Change active charcoal filter indicator will go out.
Active charcoal filters

If you have delayed changing the active charcoal filters and the indicator is not lit up, you will need to reset the counter when you replace the active charcoal filters via settings mode.

Touch and leave your finger on the V sensor.

At the same time, briefly touch the On/Off sensor (without letting go of the V sensor).

Leave your finger on the V sensor for another 5 seconds until c appears in the display.

Touch the V sensor repeatedly until h appears in the display.

Touch the On/Off sensor.

Touch the V sensor repeatedly until h 2 appears in the display.

Touch the On/Off sensor for approx. 2 seconds to confirm.

The counter is now reset.

Touch the V sensor repeatedly until c appears in the display.

Touch the On/Off sensor.

You have now left settings mode.

Useful tip:

When you are storing foods with a strong smell (such as ripe cheeses),

- place the holder containing the active charcoal filters on the shelf where the food is going to be stored,

- change the active charcoal filters early if required (remembering to reset the counter),

- and place more active charcoal filters (in holders) in the appliance.

Active charcoal filters and holders can be obtained from your Miele dealer or from Miele.
Repairs to electrical appliances should only be carried out by a suitably qualified and competent person in strict accordance with current local and national safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.

What to do if . . .

. . . the PerfectFresh zone or freezer section does not get cool.

- Check whether the relevant section is switched on. The temperature display must be lit up.
- Check that the plug is correctly inserted into the socket and switched on.
- Check that the fuse is not defective and the mains fuse has not tripped. If it has there could be a fault with the household electrical wiring, the fridge-freezer or another electrical appliance. Contact a qualified electrician or Miele.

. . . the door to the freezer section will not open because it has been opened and closed too many times in succession.

This is not a fault. The suction caused by opening and closing the door is preventing the door from opening. Wait a few minutes and then try again. It should now open without force.

. . . the temperature in the PerfectFresh zone or freezer section is too low.

- Select a warmer temperature.
- Check that the doors have been closed properly.
- Has a large amount of fresh food been put placed in the appliance at the same time? This makes the compressor run for longer, causing the temperature in the appliance to fall automatically.
- Super cool has not yet switched itself off.
- Super freeze has not yet switched itself off.

. . . the compressor is switching in too frequently and for too long.

- Check whether the ventilation gaps have been covered over or become dusty.
- Check whether the metal grille (heat exchanger) at the back of the appliance has become too dusty.
- The doors have been opened too frequently, or a large amount of fresh food has been put in at once for freezing.
- Check that the doors have been closed properly.

. . . the compressor runs continuously.

To save energy, the compressor runs at a lower speed, but for longer, when less cooling is required.
Problem solving guide

. . . the frozen food is thawing because the freezer section is too warm.

Is the room temperature lower than the ambient temperature for which the appliance is designed?

■ If so, raise the temperature of the room.

Operating in a room which is too cold will cause the cooling system to switch off for too long, causing the freezer section to become too warm.

. . . food has frozen together.

Use a blunt instrument, e.g. a spoon handle or plastic scraper, to prise it apart carefully.

. . . the alarm sounds and the alarm off sensor is flashing.

The temperature in the PerfectFresh zone or the freezer section has risen above the set temperature because

■ the door has been opened too frequently, or large amounts of fresh food have been placed in the appliance at once.

■ the ventilation gaps are blocked.

Once the problem has been resolved and the correct temperature has been reached, the alarm indicator will go out and the alarm will stop.

. . . bars light up in the temperature display.

Check the temperature displays about 6 hours after switching on the appliance. Only temperatures within the range the appliance can display will be shown.

. . . "F" appears in one of the temperature displays.

There is a fault. Call the Service Department.

. . . the Change active charcoal filter indicator is red.

■ Replace the active charcoal filters.

You can order replacement filters via your Miele dealer or the Miele Spare Parts Department.

. . . "nA" appears in the temperature display.

The temperature has risen too high at some point during the last couple of days because of a power cut.

■ Touch the alarm off sensor whilst "nA" is lit up in the display.

The alarm will stop and the temperature display will show the warmest temperature recorded in the freezer section during the power cut.

Depending on the temperature displayed, you should check the condition of food in the freezer. If it has defrosted or started to defrost, check that it is still safe to use and if so use it as soon as possible. Defrosted food may only be re-frozen after it has been cooked.

The warmest temperature will show in the display for about 1 minute. The display will then revert to showing the current temperature in the freezer.
Problem solving guide

. . . "dn" appears in the temperature display.
The demonstration function is activated.
■ Call the Service Department.

. . . you cannot switch the ice cube maker on.
■ Check whether the appliance is connected to the electricity supply.

. . . the ice cube maker is not producing any ice cubes.
■ Was the water inlet pipe purged of air by a qualified and competent person before the appliance was used for the first time?
■ Check whether the ice cube maker is switched on.
■ Check whether the freezer section is switched on.
■ Check whether the water inlet is open.
■ Check that the ice cube drawer has been closed properly.
   It can take up to 24 hours to produce the first ice cubes.

. . . the ice cube maker is only producing small ice cubes.
The size of ice cubes which are produced over a certain period of time will depend on the water pressure present.
If the ice cube maker is only producing small ice cubes the water pressure is low.
■ Lengthen the water intake time for the ice cube maker (see "Making ice cubes").

. . . the indicator light on the ice cube maker flashes.
The ice cube tray is in its cleaning position (see "Cleaning and care").
If this is not the case, then there is a fault.
■ Call the Service Department.

. . . you cannot switch the appliance off.
The safety lock has been activated.

. . . the interior lighting in the PerfectFresh zone is not working.
Was the door left open for too long? The lighting switches itself off automatically after approx. 15 minutes if the door is left open.
If this is not the case, then the interior lighting is defective.
■ Call the Service Department.
The LED lighting may only be repaired or replaced by a service technician. There are live electrical components under the cover. Danger of injury and damage.

Do not remove the cover. If the cover is damaged or needs to be removed due to damage, exercise caution. There are lasers in the lighting (laser beam class 1M) which you should avoid looking at directly. Do not use optical instruments (magnifying glass or similar) to look at the lighting either.
... the floor of the PerfectFresh zone is wet.

The condensate drain hole is blocked.

- Clean the condensate channel and drain hole.

If you still cannot remedy the fault having followed these suggestions, please contact the Miele Service Department.

To prevent unnecessary loss of temperature it is advisable not to open the doors while waiting for the appliance to be serviced.
Normal noises | What causes them
---|---
Brrrrr... | Humming noise made by the motor (compressor). This noise can get louder for brief periods when the motor is switching on.
Blubb, blubb.... | A gurgling noise can be heard when coolant is circulating through the pipes.
Click.... | Clicking sounds are made when the thermostat switches the motor on and off.
Sssrrrrr.... | On multi-zone and frost-free appliances you can sometimes just hear the movement of air circulating inside the appliance.
Creak ... | Creaking sounds can be heard when material inside the appliance expands.

Remember that the noise of the compressor and the coolant circulating in the system is unavoidable.

| Rattling, vibrating | **The appliance is uneven**: Realign the appliance using a spirit level, by raising or lowering the screw feet underneath the appliance.  
**The appliance is touching another appliance or piece of furniture**: Move it away.  
**Drawers, baskets or shelves are unstable or sticking**: Check all removable items and refit them correctly.  
**Are any bottles or containers unstable or knocking against each other?** Separate them.  
**The transport cable clips are hanging loose at the back of the appliance**: Remove the clips. |
After Sales / Guarantee

In the event of a fault which you cannot correct yourself, or if the appliance is under guarantee please contact:

– your Miele Dealer

or

– the Miele Service Department.

See end of this booklet for contact details. Please note that telephone calls may be monitored and recorded for training purposes and that a call-out charge will be applied to service visits where the problem could have been resolved as described in this booklet.

When contacting your Dealer or Miele, please quote the model and serial number of your appliance.

This information is given on the data plate inside your appliance.

Guarantee: U.K.

In the U.K. the appliance is guaranteed for 2 years from the date of purchase. However, you must activate your cover by calling 0845 365 6640 or registering online at www.miele.co.uk.

Guarantee: Other countries

For information on the appliance guarantee specific to your country please contact Miele.

See end of this booklet for contact details.
Testing must be carried out in accordance with the relevant Norms and Directives.

In addition, the following manufacturer's instructions should be observed when preparing and carrying out tests:

– Loading plans,
– Instructions in the Operating and installation instructions.

The PerfectFresh compartment satisfies the requirements of a chill compartment to EN ISO 15502.
Notes on connecting to the mains water supply

Connection to the mains water supply should only be carried out by a qualified and competent person.

Disconnect the appliance from the mains electricity supply before connecting it to the mains water supply.

Close the stopcock before connecting the water intake hose to the appliance.

The water quality must conform to the requirements for drinking water in the country the appliance is being installed in.

This appliance meets the requirements of IEC 61770 and EN 61770.

Connection to the household water supply must comply with current national and local safety regulations in the country in which the appliance is being installed. All items used for connecting the appliance to the mains water supply must comply with current national and local safety regulations in the country in which the appliance is being installed.

The appliance is only suitable for connection to a cold water supply, which

- is connected directly to the fresh water supply, to guarantee circulation of water throughout the system.

Avoid laying the water hose in such a way that water can collect in it, as this can affect the taste of the water or the ice cubes.

- sustains operating pressure.
- complies with hygiene regulations.
- The water pressure (flow rate) must be between 1.5 and 6 bar.
The stainless steel hose supplied is 1.5 m long and must not be lengthened.

A faulty stainless steel hose must only be replaced by a genuine Miele replacement hose (available from Miele). Make sure that the water hose is suitable for food use.

A stopcock must be provided between the stainless steel hose and the household water supply to ensure that the water supply can be cut off if necessary.

The stopcock should be easily accessible after the appliance has been installed.

---

### Connection to the water inlet

Before making plumbing connections, ensure the appliance is disconnected from the mains electricity supply.

Connection to the mains water supply should incorporate a mains stopcock with $\frac{3}{4}$\" thread.

- Connect the stainless steel hose to the stopcock.
- Ensure that it is screwed into position correctly.

Before using the appliance for the first time the water inlet pipe should be purged of air by a qualified and competent person.

- To do so the stainless steel hose should be filled as far as possible with water before being connected to the solenoid valve.
- Mop up any spillages with a cloth.
Mains water connection

- The stainless steel hose should be attached to the solenoid valve at the base of the appliance at the back.

  Ensure that all connections are watertight.

- Turn on the stopcock slowly and check the whole water system for leaks.

- The appliance can then be connected to the electricity supply (see "Electrical connection").

- Push the appliance into its final position.

When doing so, make sure that the stainless steel hose is not kinked or damaged.

  After a maximum of 24 hours the first ice cubes will drop out of the ice cube maker and collect in the drawer.
Electrical connection U.K.

All electrical work should be carried out by a suitably qualified and competent person in strict accordance with current local and national safety regulations (BS 7671 in the UK).

The appliance is supplied with a mains cable and moulded plug ready for connection to an a.c. single phase 220-240 V 50 Hz supply.

Please ensure that the connection data quoted on the data plate match the household mains supply.

Connection should be made via a suitable switched socket which is easily accessible. It must not be located behind the appliance. For extra safety it is advisable to protect the appliance with a suitable residual current device (RCD).

Do not connect the appliance to the mains electricity supply by an extension lead. Extension leads do not guarantee the required safety of the appliance (e.g. danger of overheating).

This appliance must not be connected to the inverter of an autonomous power supply, e.g. a solar power system. When switching the appliance on, a surge in power could trigger the safety cut-out mechanism. This could damage the electronic unit.

The appliance must not be used with so-called energy saving devices. These reduce the energy supply to the appliance which could then become too warm. Using such devices could alter the specification of the product.

If the connection cable has to be replaced, this must be done by a suitably qualified and competent person.

Do not plug other appliances in behind this appliance

Non-rewireable plugs (BS 1363)

The fuse cover must be re-fitted when changing the fuse, and if the fuse cover is lost, the plug must not be used until a suitable replacement is obtained. The colour of the correct replacement cover is that of the coloured insert in the base of the plug, or the colour that is embossed in words in the base of the plug (as applicable to the design of the plug fitted).

Replacement fuses should be ASTA approved to BS 1362 and have the correct rating. Replacement fuses and fuse covers may be purchased from your local electrical supplier.

WARNING
THIS APPLIANCE MUST BE EARTHED
Installation

Do not place any appliance which gives off heat, such as a toaster, mini-oven or double burner hob, on top of this appliance. There is the danger of these catching fire.

This appliance has side-wall heating and can be installed side-by-side with another refrigeration appliance. Please ask your supplier for details of suitable appliances.

Location

This appliance should be installed in a dry, well-ventilated room. It should not be installed where it is exposed to direct sunlight or directly adjacent to a heat-producing appliance such as an oven or a radiator. The room temperature should not go above or below the climate range for which the appliance is designed. The higher the ambient temperature of the room, the more energy the appliance requires to operate.

When installing the appliance please be aware:

- The socket must be easily accessible in an emergency, not concealed behind the appliance.
- The plug and cable must not touch the rear of the appliance as they could be damaged by vibrations from the appliance.
- Do not plug in other appliances behind this appliance.

Important. In environments with high humidity condensation can build up on the exterior of the appliance. This can cause corrosion of the appliance walls. For prevention, it is advisable to install the appliance with sufficient ventilation in a dry and/or air-conditioned room. Make sure that the appliance door is closing and sealing properly, the ventilation gaps are not covered and the appliance is installed in accordance with these installation instructions.

Climate range

The appliance is designed for use within certain climate ranges (ambient temperatures), and should not be used outside this range. The climate range of the appliance is stated on the data plate inside the appliance.

<table>
<thead>
<tr>
<th>Climate range</th>
<th>Ambient room temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>SN</td>
<td>+10°C to +32°C</td>
</tr>
<tr>
<td>N</td>
<td>+16°C to +32°C</td>
</tr>
<tr>
<td>ST</td>
<td>+16°C to +38°C</td>
</tr>
<tr>
<td>T</td>
<td>+16°C to +43°C</td>
</tr>
<tr>
<td>SN-ST</td>
<td>+10°C to +38°C</td>
</tr>
<tr>
<td>SN-T</td>
<td>+10°C to +43°C</td>
</tr>
</tbody>
</table>

Operating in a room which is too cold will cause the cooling system to switch off for too long, causing the internal temperatures in the appliance to rise with the risk of frozen food deteriorating and going off.
Ventilation

Air at the back of the appliance gets warm. To ensure sufficient ventilation the air inlet and outlet must not be covered or blocked in any way. They should be dusted on a regular basis.

Appliances with wall spacers supplied

The wall spacers supplied with some appliances must be used in order to achieve declared energy consumption values. Appliance depth is increased by approx. 35 mm with the wall spacers fitted. If the wall spacers are not used, this does not influence the functionality of the appliance. Energy consumption is only minimally increased if there is little distance between the appliance and the wall.

- Fit the wall spacers onto the back of the appliance on the top left and right.

Installation

- Remove the cable clip from the back of the appliance.
- Check that all parts at the back of the appliance are unhindered. Carefully remove any hindrance.
- Carefully push the appliance into position.
- Position the appliance with the wall spacers (if used) or the back close to the wall.

Aligning the appliance

- To align the appliance, adjust the feet using the spanner supplied.
- If necessary, also align the two rear adjusting devices ① using a socket wrench ②. Turn the adjusting device clockwise to raise the appliance up at the back.
Levelling the appliance door

Ensure that you unscrew adjusting foot 3 from the hinge plate until it sits on the floor. Then unscrew the foot by a further 90°.

* Dimensions without wall spacers fitted. Appliance depth is increased by approx. 35 mm with the supplied wall spacers fitted.
Installing in a side-by-side combination

To avoid a build-up of condensation and resultant damage, refrigerators and freezers should not normally be installed side-by-side. However, this appliance has side wall heating, and can be installed side-by-side with certain other Miele appliances.

Your dealer will be able to advise you on which models are suitable.

Installing the appliances

Two people are needed to install the appliances side-by-side.

Warning. Risk of damage when moving the appliances once they have been joined together as they are very heavy. Moving them incorrectly can cause dents. Carefully observe the instructions on how to move the appliances.

- The freezer or appliance with freezer section must be installed to the left of any refrigerator when viewed from the front. The side wall heating in the right-hand wall of the freezer or appliance with freezer section is insulated to prevent the build-up of condensation between the two appliances.

- To move the appliances always hold them by the outer front corners.

- Place the two appliances as close as possible to their final position so that they can be aligned for any unevenness in the floor. The back of the appliances still needs to be kept accessible to complete the installation.

Instructions for moving the appliances once they have been joined

- Push the left and then the right corners alternately.

  - If the joined appliances are directly in front of the niche:

    - Carefully push the two appliances back into their final position.

  - If the joined appliances have to be taken out of their niche:

    - Hold the bottom third section and pull the appliances straight forwards.
Joining the two appliances together

The following fixing parts are supplied:

16 SW 10 spanner
17 SW 2 allen key (supplied with stainless steel appliances for adjusting the height of the hinge plate)

You will also need the following:
- Spirit level
- Cordless screwdriver
- TX 25 screwdriver

Before starting, peel off any protective foil from the appliance casing.

Installation steps at the front of the appliances

- Use spanner 16 supplied to screw in feet (for supporting the appliance doors) A completely. They must not come in contact with the floor.
- Fit covers 1 to the four front feet.

Place the appliances next to one another so that the fronts are aligned, leaving a gap of 10 mm between them.
Remove covers ➁ at the top. Attaching the connecting plate will align the appliances in height and depth. If one of the appliances is higher than the other, start with the higher appliance:

Loosely screw connecting plate ➂ to one of the appliances using two screws ➃.

Push connecting plate ➂ until the central ridge of the plate touches the side of the appliance.

Now tighten both screws ➃.

Secure connecting plate ➂ to the other appliance. To do this push the appliances together or apart a little, as necessary.

Remove the two covers ➄ from the bottom of the appliances.

Remove screw ➅, if present. This screw is no longer required.
Attaching the connecting plate will align the appliances in depth. If one of the appliances protrudes further forward than the other, start with the further forward appliance:

- Position connecting plate 7 so that the vertical slots are on the side of the panel which will be attached to an appliance first. Attach it loosely with two screws 8.

- Push connecting plate 7 until the central ridge on the bracket touches the side of the appliance.

- Now tighten both screws 8.

- Secure connecting plate 7 to the other appliance. To do this push the appliances together a little, as necessary.

---

**Installation steps at the back of the appliances**

- Fit connecting bracket 9 onto the top of the sides in the middle.

- Fit connecting piece 10 into the relevant gap below.

- Tighten connecting piece 10 using screw 11 supplied. Warning: Do not drill a hole in the appliance for this screw.

To avoid vibrations, the connecting bracket, connecting piece and screw must not touch the pipework at the back of the appliances.
Installing in a side-by-side combination

Installation steps at the front of the appliances

- Screw in middle feet (C) completely. They must not come in contact with the floor.

- Align the joined appliances using outer feet (B).

Adjust the feet (see also "Installation - Aligning the appliance"): 
- at the front:
  Align the feet using spanner (18) supplied.
- at the back:
  Use a screwdriver to align the feet with the adjusting device. Turn the adjusting device clockwise to raise the appliance up at the back.

- Position the front of the long stainless steel trim (12) in the gap, making sure that it is located above connecting plate (7).

  Pressing both ridges along the trim together as you do so makes it easier to fit the trim into the gap.

- Carefully work stainless steel trim (12) into the gap. Use a soft cloth to do this to avoid denting the trim.

- Carefully remove the protective foil from the stainless steel trim.
Installing in a side-by-side combination

- Push short trim 13 into the gap at the top of the appliances. Make sure that the front edge of the trim sits flush up against the edge of connecting plate 3.

- Fit cover 14 between the control panels. Make sure that the outer edges of the cover are flush with the control panels. The cover can be pulled out to adjust it to the right size.

- Connect both appliances to the electricity supply as described in the operating instructions supplied with the appliances.

- Appliances with an ice cube maker: Connect the appliance to the mains water supply as described in the operating instructions supplied with it.

  Warning. Risk of damage when moving the appliances once they have been joined together as they are very heavy. Moving them incorrectly can cause dents. Carefully observe the instructions on how to move the appliances.

- Carefully push the two appliances back into their final position.

- If necessary align the height of the appliances again using outer feet 8.

- Unscrew middle feet C until they are on the floor.

- Support the appliance doors with foot A on the hinge plate: Unscrew foot A until it sits on the floor. Then unscrew the foot by a further 90°.

- Fit cover 15 over the connecting plate at the bottom of the appliances.
Aligning the appliance door

Stainless steel appliances (height adjustable door)

The height of the appliance door can be aligned using the bottom hinge plate:

- Unscrew threaded pin 16 by a maximum of one turn using allen key 17 supplied.

- Adjust the height of the hinge pin using spanner 18 supplied.
  - To raise the door: turn clockwise
  - To lower the door: turn anti-clockwise.

  The hinge pin is screwed in completely when the appliance is delivered.

- Tighten threaded pin 16.
  The hinge pin is now fixed in position again.

Align the handles on both doors, if necessary. See "Changing the door hinging".
Do not change the door hinging if this appliance is to be installed "side-by-side" with another appliance.

**To change the door hinging you will need the following tools:**

- Two people are needed for changing the door hinging.

**Removing the door handles**

- Pull door handle ① towards you. Side section ② slides back.
- Pull side section ② firmly back out of the guides on the mounting plate.
- Undo the 4 screws (TX 15) in the mounting plate, and remove the handle.
- Remove the cover caps from the opposite side, and fit them into the empty holes.
Removing the soft-close mechanism for the upper door

■ Open the upper door.

■ Remove panel ① from the soft-close mechanism by inserting a flat-bladed screwdriver into the gap from above and easing it off bit by bit.

Take care not to damage the door seal.
If the door seal is damaged, the door will not close properly and cooling will be impaired.

■ Slide panel ① towards the appliance, and leave it hanging between the door and the appliance.

■ Fit restraining clip ② (supplied with the appliance) onto soft-close mechanism ③.

The restraining clip stops the hinge from snapping shut. Do not remove the clip until told to do so.

■ Carefully prise open cover ④ from above and below using a flat-bladed screwdriver.

■ Push hinge pin ⑤ up and out from underneath using a flat-bladed screwdriver.

Changing the door hinging
■ Remove cover ④.

The soft-close mechanism is now no longer fixed to the appliance.

■ Remove panel ①.

■ Slide soft-close mechanism bracket ⑥ as far as it will go towards the handle side of the door, and undo screws ⑦ on the soft-close mechanism.

■ Using a flat-bladed screwdriver, slide the soft-close door mechanism towards the handle side of the door, and lever it out at the side.

■ Then place it to one side.

■ Gently loosen cover ⑧ by carefully inserting a flat-bladed screwdriver into the gap.

■ Remove cover ⑧ together with retainer ⑨.

■ Then separate retainer ⑨ from cover ⑧, by pushing it slightly to the left and then pulling the cover forwards and off.

■ Rotate retainer ⑨ by 180°.

■ Then fit cover ⑧ from the front over retainer ⑨, and push it over to the right. The writing must be visible.

■ Unscrew hinge part ⑩, rotate by 180° and fit to the opposite side. If necessary drill pilot holes for the screws.

■ Remove cover ⑪ by sliding it forwards from the back and then lifting it off.

■ Remove cover ⑫ by pulling it upwards.
Changing the door hinging

Caution. The upper door is not secure as soon as the upper hinge plate is removed.

- Close the upper door.
- Undo screws 13 in upper hinge plate 14 and pull it upwards and off.
- Carefully lift the upper door off and place it to one side.
- Make sure that you leave the hinge pin in the hinge plate in the middle of the appliance, as otherwise the lower door will be unsecured.
- Then fit cover 8 together with retainer 9 on the opposite side.
- Refit cover 12 on the opposite side.

Removing the lower soft-close door mechanism

- Open the lower door.

- Remove panel 1 from the soft-close mechanism by inserting a flat-bladed screwdriver into the gap from above and easing it off bit by bit.

Take care not to damage the door seal. If the door seal is damaged, the door will not close properly and cooling will be impaired.

- Slide panel 1 towards the appliance, and leave it hanging between the door and the appliance.
- Fit restraining clip 2 (supplied with the appliance) onto soft-close mechanism 3.

The restraining clip stops the hinge from snapping shut. Do not remove the clip until told to do so.

- Carefully remove cover 4 from the side using a flat-bladed screwdriver.
- With the help of another person, tip the appliance back slightly.
Push hinge pin ⑤ up and out from underneath.

The soft-close mechanism is now no longer fixed to the appliance.

Remove panel ①.

Slide soft-close mechanism bracket ⑥ as far as it will go towards the handle side of the door, and undo screws ⑦ on the soft-close mechanism.

Using a flat-bladed screwdriver, slide the soft-close door mechanism towards the handle side of the door, and lever it out at the side.

Then place it to one side.

Removing the lower door

Close the lower door.

Pull the middle hinge pin ⑨ upwards to remove it.

Carefully lift the lower door off and place it to one side.

Pull cover ⑩ off.

Unscrew hinge plate ⑪, rotate it by 180° and fit it on the opposite side.

Turn plastic cover ⑫ 180° and refit it in the centre of hinge plate ⑪.

Refit cover ⑩ on the opposite side.
Changing the door hinging

Remove cap 12 from the bearing bush in the door and refit on the opposite side.

Refitting the lower door

Remove cover cap 5.

Undo screws 6 and take hinge plate 7 off.

Unscrew part 9 from hinge plate 7, rotate it by 180° and refit into the hole on the opposite side of the hinge plate.

Refit cover cap 5 in the other hole.

Unscrew threaded pin 4 fully using the allen key supplied.

Unscrew the threaded pin 4 on the opposite side of the hinge plate, until it is flush with the outside of the hinge plate. The end must protrude into the hole for the hinge bolt, so that the guide on the hinge bolt can be correctly located later (see following diagram).

Remove cover 8 and fit it into the holes on the opposite side.

Unscrew threaded pin 4 by one turn using the allen key supplied.

Pull hinge pin 1 together with disc 2 and adjustable foot 3 upwards and off.

Unscrew part 9 from hinge plate 7, rotate it by 180° and refit into the hole on the opposite side of the hinge plate.

Unscrew threaded pin 4 fully using the allen key supplied.

Unscrew the threaded pin 4 on the opposite side of the hinge plate, until it is flush with the outside of the hinge plate. The end must protrude into the hole for the hinge bolt, so that the guide on the hinge bolt can be correctly located later (see following diagram).

Remove cover 8 and fit it into the holes on the opposite side.
Screw hinge plate 7 into position on the opposite side using the two outer long slots only. To make it possible to align the door later, do not replace the centre screw at this stage.

Important. Screw the adjustable foot 3 into hinge pin 1 as far as it will go.

Place hinge pin 1 together with disc 2 and adjustable foot 3 with the guide at the end of the threaded pin and screw it in.

Then tighten threaded pin 4.

Place the lower door onto hinge pin 3 from above.

Close the lower door.

Fit hinge pin 9 into middle hinge plate 11 in the lower door.

Replacing the lower soft-close door mechanism

Remove cover 1 from panel 2, rotate it by 180° and refit it on the other side.
Changing the door hinging

- Insert the soft-close mechanism back into the door, starting at the appliance side.

- Slide the soft-close mechanism back into the door as far as it will go towards the appliance using a flat-headed screwdriver.

The screw holes on the left and right must line up perfectly.

- First screw the soft-close mechanism onto the appliance side, then onto the handle side, pushing it firmly towards the appliance.

- Attach panel 2 to soft-close mechanism bracket 4.

- Align bracket 4 to the hinge plate, and insert pin 5 from above so that the right angle fits into the recess.

- Click cover 6 back into place.

Make sure that cover 6 fits properly so that the door can be closed without hindrance and the pin is protected.

- Remove restraining clip 7.

- Replace panel 2 onto the soft-close mechanism from above, clicking it back into place first at the bottom and then at the top.

- Close the lower door.
Refitting the upper door

- Then fit the upper door on middle hinge pin 9.
- Close the upper door.

- Fit hinge plate 14 onto the opposite side and secure it with screws 13. If necessary drill pilot holes for the screws or use a battery operated screwdriver.
- Refit cover 11 on the opposite side.
- Align the door with the appliance housing using the long slots in the lower hinge plate. Then tighten the screws.

Replacing the upper soft-close door mechanism

- Remove cover 1 from panel 2, rotate it by 180° and refit it on the other side.
- Insert the soft-close mechanism back into the door, starting at the appliance side.
- Slide the soft-close mechanism back into the door as far as it will go towards the appliance using a flat-headed screwdriver.

The screw holes on the left and right must line up perfectly.
First screw the soft-close mechanism onto the appliance side, then onto the handle side, pushing it firmly towards the appliance.

Attach panel to soft-close mechanism bracket.

Push cover on from the side so that the openings for the pin are vertically aligned.

Align bracket to the hinge plate, and insert pin from above so that the right angle fits into the recess.

Clip cover into position.

Make sure that cover fits properly so that the door can be closed without hindrance and the pin is protected.

Remove restraining clip.

Replace panel onto the soft-close mechanism from above, clicking it back into place first at the bottom and then at the top.

Close the upper door.

Refitting the handles

Please make sure you follow the instructions below carefully when you refit the handles. The door seal will be damaged if the handle is fitted incorrectly.

It is important to check that the side section of the handle 4 does not come into contact with the door seal when opening the door, as this would damage the door seal permanently.

If, after you have refitted the handle, you find that the side section does touch the door seal when the door is opened:

- Realign mounting plate 3 with threaded pins 1 until the mounting plate and the side section of the handle 4 are at the correct angle and the side section does not touch the door seal when the door is opened.

Loosely attach the handle to the opposite side of the door with the two front screws 2.

Mounting plate 3 must be positioned on the side of the door so that when the door is closed it is flush with the side of the appliance.

If this is not the case,

- tighten both threaded pins 1 with a suitable allen key until mounting plate 3 lines up correctly.
- Then tighten all 4 screws 2.
- Slide the side section of the handle 4 into the guides on the mounting plate until it clicks into place.

It is important to check that the side section of the handle 4 does not come into contact with the door seal when opening the door, as this would damage the door seal permanently.

Aligning the appliance doors

The appliance doors can be aligned with the housing after they have been fitted.

In the following illustration the door is not shown in the closed position to make it easier to see what you have to do.

To align the **lower door** use the long outer slots in the lower hinge plate:

- Remove centre screw ① from the hinge plate.
- Slightly loosen both outer screws ②.
- Align the door by sliding the hinge plate to the left or right.
- Then tighten screws ② again. Screw ① does not need to be used again.

To align the **upper door** use the long outer slots in the middle hinge plate:

- Slightly loosen both screws ③.
- Align the door by sliding the hinge plate to the left or right.
- Then tighten screws ③.
Building in the appliance

The appliance can be installed in a kitchen run. To match the height of the rest of the kitchen, the appliance can be fitted with a suitable top box ①.

A ventilation gap of at least 50 mm depth must be allowed for behind the appliance across the entire width of the top box for air to circulate. The cross section of the air outlet under the room ceiling must be at least 300 cm² to ensure that air can circulate without hindrance. Otherwise the appliance has to work harder, resulting in an increase in electricity consumption.

The air inlet and outlet must not be covered or blocked in any way. They should be dusted on a regular basis.

When built into a kitchen run (max. depth 580 mm) the appliance can be installed directly next to a kitchen furniture housing unit. The appliance door will protrude in front of furniture fronts at the sides by 34 mm* and by 55 mm* in the middle of the door. This enables the doors to be opened and shut without being obstructed.

When installed **next to a wall** ④ a distance of approx. 55 mm must be maintained on the hinge side between the wall ④ and the appliance ②, so that the doors and the handles have sufficient space for opening.
